Semester: VI									
]	ENTREPRENEURSHIP & INTELLECTUAL PROPERTY RIGHTS								
				(Theory)					
<b>Course Code</b>	:	HS361TA		CIE	:	100 Marks			
Credits: L: T:P	Credits: L: T:P : 3:0:0   SEE   : 100 Marks								
<b>Total Hours</b>	:	42 L		SEE Duration	:	3 Hours			

Unit-I 08Hrs

**Introduction to Entrepreneurship**: Definition and Scope of Entrepreneurship, Importance of Entrepreneurship in Engineering Innovation and Economic Growth, Techniques for Identifying Entrepreneurial Opportunities, Types of Entrepreneurs: Innovative, Imitative, Fabian, Characteristics and Traits of Successful Entrepreneurs.

**Role in economic development**- Emerging Trends in Entrepreneurship, Entrepreneur and Entrepreneurship, characteristics of Entrepreneur, Myths about Entrepreneurship, Entrepreneur vs Intrapreneur, Role of Entrepreneurial Teams

Activities: Case study on Entrepreneurship in Indian Scenario, Ideation Workshops and Hackathons,

Unit – II 08 Hrs

**Entrepreneurial Opportunity Evaluation**: Identifying Market Opportunities and Trends, Integration of Engineering Principles in Ideation Process, Cross-Disciplinary Collaboration for Technological Innovation, Assessing Market Feasibility and Demand Analysis, Evaluating Technical Feasibility: Prototype Development, Proof of Concept, Financial Feasibility Analysis: Cost Estimation, Revenue Projection, Break-Even Analysis.

**Business Planning and Strategy Development**: Elements of a Business Plan, Executive Summary, Company Description, Market Analysis, writing a Business Plan: Structure and Components, Strategic Planning: Vision, Mission, Goals, Objectives, SWOC Analysis, Competitive Strategy: Porter's Generic Strategies, Differentiation, Cost Leadership, Focus Strategy, Growth Strategies: Organic Growth, Mergers and Acquisitions, Strategic Alliances

**Activities**: Writing a Business Plan on given templates, Developing Business Models and Prototypes Based on Generated Ideas

Unit –III 08Hrs

**Entrepreneurial Marketing and Sales:** Basics of Marketing: Product, Price, Place, Promotion (4Ps), Market Segmentation, Targeting, and Positioning (STP), Branding and Product Development Strategies, Creating a Unique Value Proposition (UVP) Digital Marketing: Social Media Marketing, Content Marketing, SEO, SEM, Sales Techniques and Customer Relationship Management (CRM).

Entrepreneurial Finance and Resource Management: Sources of Financing: Equity Financing, Debt Financing, Venture Capital, Angel Investors, Crowdfunding, Financial Management: Budgeting, Cash Flow Management, Financial Statements Analysis, Risk Management and Insurance, Human Resource Management: Recruitment, Training, Performance Evaluation, Legal and Ethical Issues in Entrepreneurship: Intellectual Property Rights, Contracts, Corporate Governance

Activities: Case Studies and Practical Applications

Unit –IV 09Hrs

Introduction to IP: Types of Intellectual Property

**Patents:** Introduction, Scope and salient features of patent; patentable and non-patentable inventions, Patent Procedure - Overview, Transfer of Patent Rights; protection of traditional knowledge, Infringement of patents and remedy, Case studies, Patent Search and Patent Drafting, Commercialization and Valuation of IP.

**Trade Marks:** Concept, function and different kinds and forms of Trade marks, Registrable and non-registrable marks. Registration of Trade Mark; Deceptive similarity; Transfer of Trade Mark, ECO Label, Passing off, Infringement of Trade Mark with Case studies and Remedies.

Unit –V 09 Hrs

Trade Secrets: Definition, Significance, Tools to protect Trade secrets in India.

**Industrial Design:** Introduction of Industrial Designs Features of Industrial, Design. Procedure for obtaining Design Protection, Revocation, Infringement and Remedies, Case studies.

**Copy Right:** Introduction, Nature and scope, Rights conferred by copy right, Copy right protection, transfer of copy rights, right of broad casting organizations and performer's rights, Exceptions of Copy Right, Infringement of Copy Right with case studies.

# Go, change the world

Course Outcomes:							
After goin	After going through this course, the student will be able to						
CO1	Understand the concepts of entrepreneurship and cultivate essential attributes to become an entrepreneur or Intrapreneur and demonstrate skills such as problem solving, team building, creativity and leadership.						
CO2	Comprehend the process of opportunity identification of market potential and customers while developing a compelling value proposition solutions.						
CO3	Analyse and refine business models to ensure sustainability and profitability and build a validated MVP of their practice venture idea and prepare business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture.						
CO4	Apply insights into the strategies and methods employed to attain a range of benefits from these IPs and deliver an investible pitch deck of their practice venture to attr act stakeholders						
CO5	Knowledge and competence related exposure to the various Legal issues pertaining to Intellectual Property Rights with the utility in engineering perspectives.

	RUBRIC FOR THE CONTINUOUS INTERNAL EVALUATION (THEORY	7)
#	COMPONENTS	MARKS
1.	QUIZZES: Quizzes will be conducted in online/offline mode. TWO QUIZZES will be conducted & Each Quiz will be evaluated for 10 Marks. THE SUM OF TWO QUIZZES WILL BE THE FINAL QUIZ MARKS.	20
2.	TESTS: Students will be evaluated in test, descriptive questions with different complexity levels (Revised Bloom's Taxonomy Levels: Remembering, Understanding, Applying, Analyzing, Evaluating, and Creating). TWO tests will be conducted. Each test will be evaluated for 50 Marks, adding up to 100 Marks. FINAL TEST MARKS WILL BE REDUCED TO 40 MARKS.	40
3.	<b>EXPERIENTIAL LEARNING:</b> Students will be evaluated for their creativity and practical implementation of the problem. Case study-based teaching learning (10), Program specific requirements (10), Video based seminar / presentation / demonstration (20) <b>ADDING UPTO 40 MARKS</b> .	40
	MAXIMUM MARKS FOR THE CIE THEORY	100

	RUBRIC FOR SEMESTER END EXAMINATION (THEORY)						
Q. NO.	Q. NO. CONTENTS						
	PART A						
1	Objective type questions covering entire syllabus	20					
	PART B						
	(Maximum of TWO Sub-divisions only)						
2	Unit 1 : (Compulsory)	16					
3 & 4	Unit 2 : Question 3 or 4	16					
5 & 6	Unit 3: Question 5 or 6	16					
7 & 8	7 & 8 Unit 4 : Question 7 or 8						
9 & 10	Unit 5: Question 9 or 10	16					
	TOTAL	100					

Semester: VI								
		F	BIG DATA SYSTEN	AS				
		Category	: PROFESSIONA	L CORE COURS	SE			
			(Theory and Prac	tice)				
Course Code	:	CD362IA		CIE	:	100 + 50 Marks		
Credits: L:T:P : 3:0:1								
Total Hours	:	45L+30P		SEE Duration	:	3 + 3 Hours		

Unit-I 09 Hrs

**Different Types of Data and Storage for Data**: Structured Data (Relational Databases), Semi-structured data (Object Stores), and Unstructured Data (File systems), Characteristics of Big Data. Systems perspective - Processing: In-memory vs. (from) secondary storage vs. (over the) network.

**Locality of Reference:** Principle, examples

**Impact of Latency:** Algorithms and data structures that leverage locality, data organization on disk for better locality

Unit – II 09 Hrs

**Parallel and Distributed Processing:** Motivation (Size of data and complexity of processing); Storing data in parallel and distributed systems: Shared Memory vs. Message Passing; Strategies for data access: Partition, Replication, and Messaging.

**Distributed Systems**: Motivation (size, scalability, cost-benefit), Client-Server vs. Peer-to-Peer models, Cluster Computing: Components and Architecture

Big Data Analytics: Requirements, constraints, approaches, and technologies.

**Big Data Systems** – Characteristics: Failures; Reliability and Availability; Consistency – Notions of Consistency.

CAP Theorem and implications for Big data Analytics

Unit –III 09 Hrs

**Hadoop:** Introduction, Architecture, and Map-reduce Programming on Hadoop, Hadoop Distributed File System (HDFS), Scheduling in Hadoop (using YARN). Example – Hadoop application, **Hadoop Ecosystem:** Databases and Querying (HBASE, Pig, and Hive)

**Hadoop Ecosystem:** Integration and coordination (Sqoop, Flume, Zookeeper & Oozie)

Unit –IV 09 Hrs

**Distributed Architecture and Computing-**HPCC Systems HPCC System functions, Data Lake Architecture, The HPCC Systems design, Thor Vs ROXIE, Hadoop V/s HPCC Systems, ECL programming An activity Declaration, A Record Declaration, Schema on Read (RECORD) explained, A Function Declaration, A MODULE, ECL File(s), Importing files, Spraying and Reading a file Data Shaping (Transforming): Function, Module and Project, Iterate and Rollup ,Sort, Join and Dedup ,Normalize and Denormalize ,Distribute and Reading The Execution Graph, GROUP and functions (SUM, AVE, COUNT...), TABLE and AGGREGATE

Unit –V 09 Hrs

**Spark:** Introduction, Architecture and Features, **Programming on Spark:** Resilient Distributed Datasets, Transformation, Examples, **Machine Learning (on Spark):** Regression, Classification, Collaborative Filtering, and Clustering, **Streaming on Spark:** Architecture of Spark Streaming, Stream Processing Model, Example.

Course	Outcomes: After completing the course, the students will be able to: -
CO 1	Interpret/explore popular distributed systems architectures, emphasizing their significance in
	addressing Big Data challenges through scalable, fault-tolerant, and efficient data processing solutions.
CO 2	Apply distributed computing principles using Hadoop, MapReduce, or HPCC Systems to design and
	implement scalable solutions for real-world Big Data challenges.
CO 3	Identify and use suitable tools and techniques for efficient Big Data storage and database management,
	leveraging advanced querying mechanisms and interfaces to enable optimized data retrieval, analysis,
	and performance.
CO 4	Demonstrate in-memory processing and stream processing techniques for building Big Data systems.
CO 5	Demonstrate skills in investigation, effective communication, teamwork/individual work, and ethical
	practices by implementing Big Data solutions for diverse applications.

#### LABORATORY COMPONENT

#### PART - A

1.

- a. Exercises on Distributed Systems Hadoop;
- b. Exercises using Map-reduce model: Map only and reduce only jobs, Standard patterns in map reduce models.

2.

- a. Exercises on NoSQL;
- b. Exercises on NoSQL database Simple CRUD operations and Failure / Consistency tests:
- c. Exercises to implement a Web based application that uses NoSQL databases

3.

- a. Exercises with Pig queries to perform Map-reduce job and understand how to build queries and underlying principles;
- b. Exercises on creating Hive databases and operations on Hive, exploring built in functions, partitioning, data analysis

4.

- a. Exercises on Spark to demonstrate RDD, and operations such as Map, FlatMap, Filter, PairRDD;
- b. Typical Spark Programming idioms such as: Selecting Top N, Sorting, and Joins;
- c. Exercises on Spark SQL and DataFrames
- 5. Exercises using Spark MLLib: Regression, Classification, Collaborative Filtering, Clustering
- 6. Exercises on Analytics on the Cloud using AWS, AWS Map-Reduce, AWS data stores/databases.

# PART – B Open Ended Project

Students are required to implement a mini project using Big Data Tools and Technologies to solve real-world problems. This project aims to provide students with practical experience in applying their knowledge of big data concepts to address challenges encountered in various domains.

#### DATA ANALYTICS & VISUALIZATION

# Category: PROFESSIONAL CORE COURSE

(Theory and Practice)

Course Code	:	CD363IA	CIE	:	100 + 50 Marks
Credits: L:T:P	:	3:0:1	SEE	:	100 + 50 Marks
<b>Total Hours</b>	:	45L+30P	SEE Duration	:	3 + 3 Hours

Unit-I 9Hrs

#### **Introduction to Data Science**

Data science, Terminology associated with Data Science, Types of Data, Data Science workflow, Popular data science toolkits, Automated methods for Data collection.

#### Introduction to Data visualisation

Data visualisation, importance of data visualisation, conventional data visualisation methods

Unit – II 9Hrs

#### **Data Collection**

Collecting the data: Hunting, scrapping, logging

Cleaning Data: Error vs Artifacts, Data Compatibility, Dealing with missing values, outlier detection

Crowdsourcing: Mechanisms for aggregation, crowdsourcing services, gamification

Unit –III 9Hrs

#### **Data Analysis**

Introduction to applied statistical techniques, types of the statistical data, types of the bigdata analytics, collecting the data for sampling and distribution, probability, frequency distribution, population and parameters, problems of estimation. Exploratory Data analysis

Unit –IV 9Hrs

## **Visualising Data**

Developing a Visualization Aesthetic: Maximising the Data - lnk ratio, Maximising the Lie factor, minimising the chart junk, scaling and labelling

Chart Types: Tabular data, dot and line plots, scatter plots, Bar plots and pie charts, Histograms and Data maps Great visualisations, Interactive visualisation

Unit –V 09 Hrs

# **Data Modelling**

Philosophies of modelling, A taxonmy of models

Baseline models: Baseline models for classification, Baseline models for value prediction

Evaluating Models: Evaluating classifiers, receiver -operator characteristic curves, evaluating multi class systems, evaluating value prediction models

Evaluation environments, simulation models

Course	Course Outcomes: After completing the course, the students will be able to: -				
CO 1	To demonstrate various techniques for automatic data collection, data cleaning and exploration using				
	visualizations.				
CO 2	To implement data collection, data cleaning and exploration techniques in a programming language.				
CO 3	To Understand and apply modelling and analysis techniques for various types of datasets including e-				
	commerce transactions, review datasets, time series datasets, text documents etc.				
CO 4	To Select methods and create effective visualizations to explain the artifacts in the data, distributions				
	of attributes, relationships between the attributes, efficacy of the models and predictions generated by				
	it.				
CO 5	Evaluate different models and their strengths and weakness for a given dataset and task.

## LABORATORY COMPONENT

# PART A Implement the following programs using Tableau / R programming

- 1. Learn how to collect data via web-scraping, APIs and data connectors from suitable sources as specified by the instructor.
- 2. Perform various types of data cleaning operations on the data collected in previous lab using data exploration, imputation etc.
- 3. Perform dimensionality reduction on a given dataset and create various visualizations like histograms, scatter-plots, etc.
- 4. Perform association analysis on a given dataset and evaluate its accuracy.
- 5. Build a recommendation system on a given dataset and evaluate its accuracy.
- 6. Build a time-series model on a given dataset and evaluate its accuracy.
- 7. Build cartographic visualization for multiple datasets involving various countries of the world; states and districts in India etc.
- 8. Perform text mining on a set of documents and visualise the most important words in visualisation such as word cloud.

# SOFTWARE ENGINEERING WITH AGILE TECHNOLOGIES Category: PROFESSIONAL CORE COURSE

(Theory)

(Common to CS, IS, CD & CY)

	(						
<b>Course Code</b>	:	IS364TA		CIE	:	100 Marks	
Credits: L:T:P	:	4:0:0		SEE	:	100 Marks	
<b>Total Hours</b>	:	60L		SEE Duration	:	: 3 Hours	
Unit-I						12 Hrs	

Unit-I
Overview: Introduction:

Professional Software Development, Software Engineering Ethics, Case studies.

Software Processes: Models, Process activities, Coping with Change, Process improvement.

## Requirements Engineering and System Modeling:

Software Requirements: Functional and Non-functional requirements. Requirements Elicitation, Specification,

Validation and Change

Unit – II 12 Hrs

**System Modeling:** Context models, Interaction models, Structural models, Behavioural models, Model driven architecture. Architectural Design: Design decisions, Architectural views, Architectural patterns and architectures Design and implementation: Object oriented design using UML, Design patterns, Implementation issues, Open-source development

Unit –III 12 Hrs

**Software Testing:** Development testing, Test-driven development, Release testing, User testing.

Software Evolution: Evolution processes. Legacy system evolution, Software maintenance

Component based software engineering: Components and component models, CBSE processes, component composition

Unit –IV 12 Hrs

**Project Management:** Risk Management, Managing People, Teamwork, Project Planning: Software Pricing, Plan driven development, Project Scheduling, Agile planning, Estimation Techniques, COCOMO cost modeling

Unit –V 12 Hrs

**Agile Software Development:** Introduction to agile methods, Agile development techniques, Agile project management and scaling agile methods.

## Kanban, Flow, and Constantly Improving:

The Principles of Kanban, Improving Your Process with Kanban, Measure and Manage Flow , Emergent Behavior with Kanban

**The Agile Coach:** Coaches Understand Why People Don't Always Want to Change, Coaches Understand How People Learn, Coaches Understand What Makes a Methodology Work, The Principles of Coaching

Cours	Course Outcomes: After completing the course, the students will be able to:-				
CO1	Understand and apply key concepts and stages of the software development lifecycle, including				
	requirements analysis, design, implementation, testing, deployment, and maintenance.				
CO2	Demonstrate an ability to use the techniques and tools in the area of software engineering				
	necessary for engineering practice				
CO3	Examine the various software design and development solutions using appropriate techniques				
CO4	Students will be able to apply various Agile methodologies such as Scrum, Kanban, or XP				
	effectively in software development projects.

09 Hrs

# **Introduction to Digital Image Fundamentals**

What is Digital Image Processing? The origin of Digital Image processing, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Image Sampling and Quantization, Some Basic Relationships between Pixels.

**Histogram Processing:** Histogram Equalization, Histogram Matching (Specification Local Histogram Processing. Fundamentals Of Spatial Filtering the Mechanics of Linear Spatial Filtering, Spatial Correlation and Convolution, Separable Filter Kernels.

Unit – II 09 Hrs

**Image Segmentation:** Fundamentals, Thresholding: The Basics of Intensity Thresholding, The Role of Noise in Image Thresholding, The Role of Illumination and Reflectance in Image Thresholding. Basic Global Thresholding Optimum Global Thresholding Using Otsu's Method Segmentation by Region Growing and By Region Splitting and Merging Region Growing Region Splitting and Merging.

Unit –III 09 Hrs

**Region Segmentation Using Clustering and Super pixels:** Region Segmentation Using K-Means Clustering, Region Segmentation Using Super pixels, Slic Superpixel Algorithm.

**Object Recognition:** Image Pattern Classification: Priori by A Human Designer, Patterns and Pattern Classes, Pattern Vectors, Structural Patterns, Pattern Classification by Prototype Matching.

Unit –IV 09 Hrs

**Object Recognition**: Minimum-Distance Classifier Using Correlation for 2-D Prototype Matching Sift Feature Matching Structural Prototypes.

**Tracking:** Tracking as an Abstract Inference Problem, Independence Assumptions, Tracking as Inference. **Data Association:** Choosing the Nearest-Global Nearest Neighbours, Gating and Probabilistic Data Association, Applications and Examples, Vehicle Tracking, Finding and Tracking People.

Unit –V 09 Hrs

**Applications:** Finding Faces Using Frame Invariance, Multilocal Visual Events, finding: Annotation and segmentation, Template matching, Shape and correspondence, Video Image-Based Rendering: Constructing 3D Models from Image Sequences, Scene Modelling from Registered Images, Scene Modelling from Unregistered Images Transfer-Based Approaches to Image-Based Rendering Affine View Synthesis.

Course	Course Outcomes: After completing the course, the students will be able to: -			
CO 1	Explain the fundamental concepts such as image acquisition, pre-processing and post processing			
	operations and fundamentals of Computer Vision.			
CO 2	Analyze the difficulties of the pattern recognition problems which include classification techniques, Feature detection and Histogram equalization process. in feature extraction methods, which help identify meaningful patterns and structures in images.			
CO 3	Apply appropriate image processing methods for image filtering, image restoration, image reconstruction, segmentation, classification and representation.			
CO 4	Designing and implement a Computer Vision system as part of an experiential learning initiative in teams to solve societal and environmental problems using pattern recognition in images and videos			
CO 5	Evaluation of the performances of different CV algorithms and its limitation, study of ethical issues related to CV applications including privacy concerns and bias in algorithms.

# SEMANTIC WEB AND SOCIAL NETWORK ANALYSIS

# Category: PROFESSIONAL CORE ELECTIVE-III

(Group-D)

(Theory)

Course Code	:	CD365TDB	CIE	:	100
Credits: L:T:P	:	3:0:0	SEE	:	100
<b>Total Hours</b>	:	45L	SEE Duration	:	3 Hours

Unit-I 09 Hrs

#### Introduction

Introduction to the Semantic Web and Social Networks: The Semantic Web- Limitations of the current Web, The semantic solution, Development of the Semantic Web, The emergence of the social web.

# **Social Network Analysis**

What is network analysis, Development of Social Network Analysis, Key concepts and measures in network analysis.

Unit – II 09 Hrs

# **Electronic sources for network analysis**

Electronic discussion networks, Blogs and online communities – Web-based networks – Applications of Social Network Analysis.

# **Knowledge Representation on the Semantic Web**

Ontologies and their role in the Semantic Web, Ontology languages for the Semantic Web(RDF, OWL).

Unit –III 09 Hrs

# Modelling and aggregating social network data

State-of-the-art in network data representation – Ontological representation of social individuals – Ontological representation of social relationships – Aggregating and reasoning with social network data – Advanced representations.

**Developing social-semantic applications:** Building Semantic Web applications with social network features, Flink: the social networks of the Semantic Web community, open academia: distributed, semantic-based publication management

Unit –IV 09 Hrs

# Evaluation of web-based social networ extraction and Ontologies are us

Differences between survey methods and electronic data extraction, Context of the empirical study, Data collection, Preparing the data, Optimizing goodness of fit, Comparison across methods and networks, Predicting the goodness of fit, Evaluation through analysis.

Ontologies are us: A tripartite model of ontologies, Case studies, Evaluation.

Unit –V 09 Hrs

# **Predicting Human Behavior And Privacy Issues**

Understanding and predicting human behaviour for social communities – User data management – Inference and Distribution – Enabling new human experiences.

Security and Privacy in Online Social Networks

Introduction, Security Objectives: Privacy, Integrity, and Availability

Course Outcomes: After completing the course, the students will be able to: -				
Analyze and understand the basics of Semantic Web and Social Networks.				
Ability to represent knowledge using ontology and Electronic sources for network analysis				
Modeling and aggregating social network data.				
Develop social-semantic applications and visualise				
Evaluate Web- based social network and Ontology

Unit-I 09 Hrs

**Neural Networks:** What is a neural network, Models of a Neuron, Activation functions, Network Architectures, Knowledge representation, Learning Process.

**Deep Feedforward Networks:** Multilayer Perceptron, Example: Learning XOR, Gradient-Based Learning, Hidden Units, Architecture Design, Back-Propagation Algorithm

Unit – II 09 Hrs

**Convolutional Networks:** Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the basic convolution function, Structured Outputs, Data types, Efficient Convolution Algorithms, Random or Unsupervised features, The Neuroscientific basis for convolutional networks.

Unit –III 09 Hrs

**Sequence Modeling:** Recurrent and Recursive Nets: Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architectures, Deep Recurrent Networks, Recursive Neural Networks, Echo State Networks, The Long Short-Term Memory and Other Gated RNNs.

Unit –IV 09 Hrs

**Autoencoders:** Undercomplete Autoencoders, Regularized Autoencoders, Representational Power, Layer Size and Depth, Stochastic Encoders and Decoders, Denoising Autoencoders, Contractive Auto encoders, Applications of Autoencoders

Unit –V 09 Hrs

**Pretrained models:** Lenet, AlexNet, VGGNet, Densenet, Resnet, Improving Deep Neural Networks- Hyperparameter Tuning, Regularization and Optimization. Data Augmentation techniques.

Other Architectures: Generative Adversarial Networks, Reinforcement Learning

Course	Outcomes: After completing the course, the students will be able to: -
CO 1	Explain the key theoretical concepts like the Universal Approximation Theorem, vanishing / exploding
	gradients, and optimization methods.
CO 2	Analyse the fundamental concepts of Deep Learning, and its various architecture learning models,
	including Neural Networks, backpropagation, gradient descent, and different Network Architectures
	(feedforward, convolutional, recurrent) Learning tasks for various applications.
CO 3	Apply the Deep learning model approaches to know the strengths and weaknesses of the architecture
	by empirical results. Apply appropriate concepts like Recurrent, Recursive Nets and Auto-encoder
	models to specific real time projects and analyse the Optimization techniques.
CO 4	Designing and implement a Deep Learning model as part of an experiential learning initiative in teams
	to solve societal and environmental problems.
CO 5	Ability to fine tune the model parameters to improve performance, explore and understand the ethical
	implications and societal impact of deploying deep learning systems in real-world scenarios,
	addressing issues like bias, fairness, and explainability.

Unit-I 9Hrs

Introduction to Generative Deep Learning, Generative Modeling What Is Generative Modeling? Historical perspective on Generative AI, Generative Versus Discriminative Modeling, Introduction to Large Language Models (LLMs), Applications of Large Language Models, Limitations and Risks of Large Language Models

Unit – II 9Hrs

**Variational Autoencoders** Introduction, Autoencoders, The Autoencoder Architecture the Encoder, The Decoder, Joining the Encoder to the Decoder, Analysis of the Autoencoder

**Building a Variational Autoencoder** The Encoder The Loss Function Analysis of the Variational Autoencoder Using VAEs to Generate Faces, Training the VAE, Analysis of the VAE, Generating New Faces, Latent Space Arithmetic, Morphing Between Faces

Unit –III 9Hrs

Generative Adversarial Networks Introduction to GAN (GAN), The Discriminator, TheGenerator Cycle GAN Overview, The Generators (U-Net) The Discriminators Compiling the Cycle GAN Training the Cycle GAN Analysis of the Cycle GAN Creating a Cycle GAN to Paint Like Monet the Generators (ResNet) Analysis of the Cycle GAN.

**Neural Style Transfer** Content Loss Style Loss Total Variance Loss Running the Neural Style Transfer Analysis of the Neural Style Transfer Model

Unit -IV 9Hrs

**Diffusion Models** Introduction Denoising Diffusion Models (DDM), The Flowers Dataset, The Forward Diffusion Process, The Reparameterization Trick, Diffusion Schedules, the Reverse Diffusion Process. **Energy-Based Models** Introduction Energy-Based Models, The MNIST Dataset, The Energy Function Sampling, Using Langevin Dynamics

Unit -V 9Hrs

**Bias and Fairness in Generative AI**: Understanding Bias in AI Types of biases (algorithmic, data, societal) Fairness Metrics Statistical parity, equal opportunity, disparate impact Mitigation Strategies Pre-processing, in-processing, and post-processing techniques

**Ethical Design and Deployment of Generative** AI Ethical AI Design Principles Human-centered design, ethical by design Deployment Challenges Real-world implementation, monitoring, and feedback loops Responsible AI Frameworks Guidelines and best practices for ethical deployment

Cours	Course Outcomes: After completing the course, the students will be able to			
CO1:	Apply the concepts and principles of Generative Artificial Intelligence to engineering requirements.			
CO2:	Design and demonstrate proficiency in implementing and training various generative AI models using			
	modern tools.			
CO3:	Investigate the need for Generative AI techniques to solve real-world problems in diverse domains.			
CO4:	Explore advanced topics and research directions in Generative AI and critically evaluate their potential			
	applications.			

# Go, change the world

CO5	Equip students with the knowledge to identify and address ethical issues in Generative AI, focusing on
	fairness, accountability, transparency, and human rights.

--------	------

# **Introduction to Information Security**

Introduction, The History of Information Security, Principles of security, CNSS Security Model, Components of an Information System, Approaches to Information Security Implementation, Security in the Systems Development Life Cycle, Security Professionals and the Organization

## The Need for Security

Threats and Attacks, Compromises to Intellectual Property, Human Error or Failure, Information Extortion.

Unit – II 9Hrs

# Legal, Ethical, and Professional Issues in Information Security

Introduction, Law and Ethics in Information Security, Relevant U.S. Laws, International Laws and Legal Bodies, Ethics and Information Security, Codes of Ethics of Professional Organizations, Key U.S. Federal Agencies

Unit –III 9Hrs

#### **Planning for Security**

Introduction, Information Security Planning and Governance, Information Security Policy, Standards, and Practices, The Information Security Blueprint, Security Education, Training, and Awareness Program

## **Risk Management**

Introduction, An Overview of Risk Management, Risk Identification, Risk Assessment, Risk Control, Quantitative Versus Qualitative Risk Management Practices, Recommended Risk Control Practices

Unit –IV 9Hrs

# Cryptography

Introduction, Foundations of Cryptology, Cipher Methods, Cryptographic Algorithms, Cryptographic Tools, Protocols for Secure Communication, Public-key Cryptography and RSA, Principles of public key cryptosystems, The RSA Algorithm

Unit-V 9Hrs

# Security Technology: Firewalls and VPN

Introduction, Access Control: Identification, authentication, authorization, accountability, Firewalls: Firewall processing Modes, Firewalls categorized by Generation, structure, Architecture, selection, configuration and management, content filters.

## **Protecting Remote Connection**

Remote Access, Virtual Private Networks

Course	Course Outcomes: After completing the course, the students will be able to :-				
CO 1	Analyse legal and ethical issues related to information security and privacy				
CO 2	Identify common security threats and vulnerabilities in computer systems and networks.				
CO 3	Implement security measures to protect data integrity, confidentiality, and availability.				
CO 4	Evaluate security risks and develop risk management strategies.				
CO5	Apply privacy-enhancing techniques to protect sensitive information.

**Introduction to tools and databases:** Introduction to Bioinformatics, Goals, Scope, Applications, Sequence databases, Structure databases, Special databases – genome and microarray, Applications of these databases, examples, Database similarity search: Unique requirements of database searching, Heuristic Database Searching, Basic Local Alignment Search Tool (BLAST), FASTA, Comparison of FASTA and BLAST, Database Searching with Smith-Waterman Method

Unit – II

Sequence Analysis: Types of Sequence alignment -Pairwise and Multiple sequence alignment, Alignment algorithms, Scoring matrices, Statistical significance of sequence alignment. Multiple Sequence Alignment: Scoring function, Exhaustive algorithms, Heuristic algorithms, Profiles and Hidden Markov Models: Position-Specific scoring matrices, Profiles, Markov Model and Hidden Markov Model, Scoring matrices - BLOSSUM and PAM

Molecular Phylogenetics: Introduction, Terminology, Forms of Tree Representation. Phylogenetic Tree Construction Methods - Distance-Based, Character-Based Methods and Phylogenetic Tree evaluation.

> Unit –III **09 Hrs**

Introduction to Next-Generation Sequencing (NGS) analysis: Sanger sequencing principles - history and landmarks, of Sequencing Technology Platforms, A survey of next-generation sequencing technologies, A review of DNA enrichment technologies, Base calling algorithms, Base quality, phred values, Reads quality checks, Interpretations from quality checks. Adapter and primer contamination. Processing reads using clipping of reads-Advantages and disadvantages of processing of reads, automation in NGS analysis and advantages (shell scripting)

> Unit -IV 09 Hrs

Structural analysis & Systems Biology: Gene prediction programs – ab initio and homology-based approaches. ORFs for gene prediction. Detection of functional sites and codon bias in the DNA. Predicting RNA secondary structure, Protein structure basics, structure visualization, comparison and classification. Protein structure predictive methods using protein sequence, Protein identity based on composition. Structure prediction - Prediction of secondary structure, tertiary structure prediction methods, Scope, Applications. Concepts, implementation of systems biology, Mass spectrometry and Systems biology, Flux Balance analysis.

> Unit -V 09 Hrs

Drug Screening: Introduction to Computer-aided drug discovery, target selection, ligand preparation and enumeration, molecular docking, post-docking processing, molecular dynamics simulations, applications and test cases, AI/ML in Drug discovery

Course	Course Outcomes: After completing the course, the students will be able to:-		
CO1	Gain proficiency in utilizing a range of bioinformatics tools and databases for comprehensive sequence and		
	structural analysis.		
CO2	Investigate and apply innovative sequencing technologies and analytical methods to solve complex biological		
	questions and advance research in genomics and molecular biology.		
CO3	Demonstrate expertise in NGS technologies, including performing data quality assessments, read processing,		
	and managing large-scale data.		
CO4	Apply bioinformatics tools for modeling and simulating biological processes, with a focus on gene prediction		
	using both ab initio and homology-based approaches.

# INDUSTRIAL SAFETY ENGINEERING Category: INSTITUTIONAL ELECTIVES-I

(Group-E) (Theory)

Course Code : CH266TEC CIE : 100 Marks
Credits: L:T:P : 3:0:0 SEE : 100 Marks
Total Hours : 45L SEE Duration : 3Hours

Unit-I 09 Hrs

#### Introduction Safety:

Introduction to industrial safety engineering, major industrial accidents, safety and health issues, key concepts and terminologies, Hazard theory, Hazard triangle, Hazard actuation, Actuation transition, Causal factors, problems on OSHA

Unit – II 09 Hrs

**Risk assessment and control:** Risk assessment, Risk perception, acceptable risk, problems on net present value, internal rate of return, payback period concepts including real life examples.

**Hazard Identification Methods:** Preliminary Hazard List (PHL), worksheets, case study. Preliminary Hazard Analysis (PHA), Fault tree and Event tree analysis. Design and development of fault tree and event tree for high pressure reactor system.

Unit –III 09 Hrs

**Hazard analysis:** Hazard and Operability Study (HAZOP): Guide words, HAZOP matrix, Procedure, HAZOP studies on reactors, heat exchanger, design of HAZOP table, Failure Modes and Effects Analysis (FMEA) concept, methodology, problems of FMEA, examples.

Unit –IV 09 Hrs

**Risk analysis on capital budgeting:** Risk adjusted discount rate (RADAR) method, certainty equivalent approach, scenario analysis, probability distribution, quantification of risk using statistical parameters and associated problems.

Unit –V 09 Hrs

**Safety in process industries and case studies: Personnel Protection Equipment (PPE):** Safety glasses, face shields, welding helmets, absorptive lenses, hard hats, types of hand PPE, types of foot PPE, types of body PPE. Bhopal gas tragedy, Chernobyl nuclear disaster, Chemical plant explosion and fire.

Course	Course Outcomes: After completing the course, the students will be able to:-				
CO1	CO1 Understand the risk assessment techniques used in process industry				
CO2	terpret the various risk assessment tools.				
CO3	Use hazard identification tools for safety management.				
CO4	Analyze tools and safety procedures for protection in process industries.

# Semester: VI ROBOTIC PROCESS AUTOMATION Category: INSTITUTIONAL ELECTIVES-I (Group-E) (Theory)

 Course Code
 : CS266TED
 CIE
 : 100

 Credits: L:T:P
 : 3:0:0
 SEE
 : 100

 Total Duration
 : 45L
 SEE Duration
 : 3 Hrs

 Unit - I
 9 Hrs

**RPA Concepts**: RPA Basics, History of Automation, what is RPA? RPA vs Automation, Processes & Flowcharts, Programming Constructs in RPA, What Processes can be Automated? Types of Bots, Workloads that can be automated.

**RPA Advanced Concepts**: Standardization of processes, Setting up the Centre of Excellence, RPA Development methodologies, Difference from SDLC, RPA journey, RPA business case, RPA Team, Process Design Document/Solution Design Document, Industries best suited for RPA, Risks & Challenges with RPA, RPA and emerging ecosystem.

Unit – II 9 Hrs

**RPA Tool Introduction:** Introduction to UiPath - the User Interface, Types of Variables, Variables in UiPath, Managing Arguments, The Arguments Panel, Namespaces; Control flow statements in UiPath, Sequences and Flowcharts, Control Flow Activities

Data Manipulation Introduction, Data Manipulation Operations, Types of data storing variables, Text Manipulation, main string methods.

**UiPath Recording:** Basic, Desktop and Web Recording, Image and Native Citrix Recording, Input/output methods, Types of OCR, Data Scraping, Advanced Scraping techniques.

Unit – III 9 Hrs

**Advanced Automation Concepts:** Selectors, Types of Selectors (Full, partial, dynamic), Defining and Assessing Selectors, Customization, Debugging.

Image, Text & Advanced Citrix Automation – Introduction, Keyboard based automation, Information Retrieval, Best Practices

Excel Data Tables & PDF, Data Tables in RPA, Excel and Data Table, Extracting Data from Data Table, Anchors, Using anchors in PDF

Unit – IV 9 Hrs

**Email Automation, Exceptions and Deploying Bots:** Introduction to Email Automation, Key concepts of email, email protocols, email automation in UiPath, email as input and output.

Debugging and Exception Handling, Types of exception, Debugging Tools, Strategies for solving issues, Catching errors.

Overview of orchestration Server, orchestrator functionalities, Connecting Bot to orchestrator

Unit – V 9 Hrs

**Hyperautomation**: Components and application of Hyperautomation, Automation versus hyperautomation, Benefits and challenges of hyperautomation, use cases, Phases (Integration, Discover, Orchestration and Governance), Trends in Hyperautomation (low-code/no-code platform, HaaS)

	Course Outcomes: After completing the course, the students will be able to
CO1	Understand RPA principles, its features and applications
CO2	Demonstrate proficiency in handling variables and decision making inside a workflow and data manipulation techniques
CO3	Gain insights into recording, Email Automation and exception handling and orchestrator.
CO4	Analyze the trends in automation and chose business strategy to design a real-world automation workflow.

# INTELLIGENT TRANSPORTATION SYSTEMS Category: INSTITUTIONAL ELECTIVES-I

(Group-E) (Theory)

	(22001)					
Course Code	:	CV266TEE		CIE	:	100 Marks
Credits: L:T:P	:	3:0:0		SEE	:	100 Marks
<b>Total Hours</b>	:	45L		SEE Duration	:	3Hours

Unit-I 09 Hrs

Introduction to Intelligent Transportation Systems (ITS): Historical background, Urbanisation, Motorisation, Transport system characteristics, Transport problems and issues, Challenges and opportunities in ITS: ITS-Today and tomorrow, ITS training and education needs, Role and importance of ITS in context of Indian Transport system and opportunity for sector growth of ITS.

Unit – II 09 Hrs

ITS Architecture: introduction, Functionalities required for User service, Logical architecture, Physical architecture, Equipment and Market packages, Need of ITS Architecture to solve problems in Urban area. Technology building blocks for ITS: Introduction, Data acquisition, Communication tools, Data analysis and Traveller information. Various detection, Identification and collection methods for ITS.

Unit –III 09 Hrs

Traffic management system components and ITS: Introduction, objectives, traffic management measures, ITS for traffic management, Development of traffic management system, Traffic Management Centre, Advance Traffic Management System, Advance Traveller Information System, Advance Vehicle Control Systems, Advance Public Transport System, Commercial Vehicle Operations, ITS For Intermodal Freight Transport.

Unit –IV 09 Hrs

ITS Evaluation – Project selection at the planning level, Deployment Tracking, Impact Assessment, Benefits by ITS components, Evaluation Guidelines. ITS for Law Enforcement: Introduction, Enhance and support the enforcement traffic rules and regulations, ITS Funding options.

Unit –V 09 Hrs

ITS Standards-Standard development process, National ITS architecture and standards, ITS standards application areas, National Transportation Communications for ITS Protocol, Standards testing. ITS for smart cities and Case studies.

# INTEGRATED HEALTH MONITORING OF STRUCTURES Category: INSTITUTIONAL ELECTIVES-I

(Group-E) (Theory)

	(22001)					
<b>Course Code</b>	:	CV266TEF		CIE	:	100 Marks
Credits: L:T:P	:	3:0:0		SEE	:	100 Marks
<b>Total Hours</b>	:	45L		SEE Duration	:	3Hours

Unit-I 09 Hrs

**Structural Health**: Factors affecting Health of Structures, Causes of Distress, Regular Maintenance, Importance of maintenance

**Structural Health Monitoring**: Concepts, Various Measures, Analysis of behavior of structures using remote structural health monitoring, Structural Safety in Alteration.

Unit – II 09 Hrs

Materials: Piezo-electric materials and other smart materials, electro-mechanical impedance (EMI) technique, adaptations of EMI technique, Sensor technologies used in SHM

**Structural Audit**: Assessment of Health of Structure, Collapse and Investigation, Investigation Management, SHM Procedures, SHM using Artificial Intelligence

Unit –III 09 Hrs

**Static Field Testing:** Types of Static Tests, Simulation and Loading Methods, sensor systems and hardware requirements, Static Response Measurement.

Unit –IV 09 Hrs

**Dynamic Field Testing:** Types of Dynamic Field Test, Stress History Data, Dynamic Response Methods, Hardware for Remote Data Acquisition Systems, Remote Structural Health Monitoring.

Unit –V 09 Hrs

**Remote Structural Health Monitoring**: Introduction, Hardware for Remote Data Acquisition Systems, Advantages, Case studies on conventional and Remote structural health monitoring

**Case studies:** Structural Health Monitoring of Bridges, Buildings, Dams, Applications of SHM in offshore Structures- Methods used for non-destructive evaluation (NDE) and health monitoring of structural components

	Course Outcomes: After completing the course, the students will be able to:-				
CO1	Diagnose the distress in the structure understanding the causes and factors.				
CO2	Understand safety aspects, components and materials used in Structural Health Monitoring.				
CO3	Assess the health of structure using static field methods and dynamic field tests.				
CO4	Analyse behavior of structures using remote structural health monitoring

Semester: VI
ADVANCED ENERGY STORAGE FOR E-MOBILITY
Category: INSTITUTIONAL ELECTIVES-I
(Group-E)
(Theory)

<b>Course Code</b>	:	CM266TEG	CIE	:	100 Marks
Credits: L:T:P	:	3:0:0	SEE	:	100 Marks
<b>Total Hours</b>	:	45L	SEE Duration	:	3.00 Hours

**Course Learning Objectives:** The students will be able to

- 1 Understand the fundamentals and technologies of energy storage in electric vehicles
- 2 Analyze and compare advanced battery technologies for e-mobility
- 3 Impart the principles of electrochemistry for analyzing issues in electric/hybrid vehicles.
- 4 Develop solutions for battery management systems and recycling of advanced storage devices.

Unit-I 09 Hrs

#### **Energy storage in electric vehicles**

Introduction to E-mobility, background of alternative energy sources and sustainability. Types of electric vehicles and their salient features along with their energy requirement. Fundamentals of advanced battery technology. Battery characteristics. Specification of advanced battery for e mobility.

Unit – II 09 Hrs

#### Advanced lithium-ion batteries

Basic concepts of lithium batteries. Types of advanced cathode and anode materials employed in lithium batteries. Construction, working and future applications of lithium cobalt oxide, lithium iron phosphate, Lithium air, lithium sulfur and lithium polymer batteries with their advancement in vehicle electrification.

Unit –III 09 Hrs

#### Non lithium batteries for e mobility

Limitations of lithium batteries. Overview of non-lithium battery technology. Construction and working of advanced non-Lithium batteries such as Lead acid, Nickel Metal Hydride, Redox flow, Zebra, Sodium and Magnesium batteries. Electrode materials and electrolyte considerations in non lithium batteries. Performance comparison with lithium-ion batteries. Battery requirement in charging infrastructure.

Unit –IV 09 Hrs

#### **Chemistry of alternative storage devices**

Introduction to super capacitor. Construction, working and applications of supercapacitors along with the materials used in electrodes. Types of advanced supercapacitors. Application of supercapacitors in regenerative braking. Advancement in battery-supercapacitor hybrid, Battery-fuel cell hybrid, and Battery-solar cell hybrid electric vehicles with their advantages and limitations.

Unit –V 09 Hrs

#### **Battery management and recycling:**

Battery management systems (BMS): Fundamentals of battery management systems and controls, State-of-charge (SoC), state-of-health (SoH) and Cell balancing techniques.

Battery Thermal Management: Passive and active cooling systems. Safety mechanisms, thermal runaway and thermal management.

Battery recycling: Economic aspects, environmental safety and process of recycling of advanced batteries.

Course	Course Outcomes: After completing the course, the students will be able to:-			
CO1	Implement the fundamentals of chemistry in advanced energy storage and conversion devices.			
CO2	Apply the chemistry knowledge used for hybridization of various energy storage and conversion			
	devices.			
CO3	Analyze the different battery system for achieving maximum energy storage for vehicle			
	electrification			
CO4	Evaluation of efficiency of a battery with respect to cost, environmental safety, material, energy			
	consumption and recycling.

#### HUMAN MACHINE INTERFACE (HMI) Category: INSTITUTIONAL ELECTIVES-I

(Group-E) (Theory)

**Industry Assisted Elective-BOSCH** 

Course Code : EC266TEI	I	CIE	:	100 Marks
Credits: L:T:P   :   3:0:0		SEE	:	100 Marks
Total Hours : 45L		SEE Duration	:	03 Hrs

Unit-I 09 Hrs

**Foundations of HMI:** The Human: History of User Interface Designing, I/O channels, Hardware, Software and Operating environments, The Psychopathology of everyday Things, Psychology of everyday actions, Reasoning and problem solving. The computer: Devices, Memory, Processing and networks. Interaction: Models, frameworks, Ergonomics, styles, elements, interactivity, Paradigms.

**Introduction to HMI and Domains**: Automotive, Industrial, CE, Medical, ECUs within car and their functionalities. Interaction between ECUs. Communication protocols for ECUs(CAN, LIN, Most, FlexRay, Ethernet etc)

Unit – II 09 Hrs

Automotive Human-Machine Interfaces: Automotive infotainment system - Evolution road map, Feature sets, System architecture, Trends, Human factors and ergonomics in automotive design, Automotive User Experience (UX) Design Principles, In-Vehicle Information Systems (IVIS), Driver-Assistance Systems (DAS) Interfaces, HMI design for adaptive cruise control, Voice and Gesture Recognition in Automotive HMIs, Touchscreen Interfaces and Controls, Usability Testing and Evaluation in Automotive HMIs, Safety Considerations and Regulations in Automotive HMIs, Emerging Technologies in Automotive HMIs, Human-Machine Interfaces for Autonomous Vehicles

Unit –III 09 Hrs

**UX and Guidelines:** Introduction to UX design - stages, theory, Design thinking, UX Study, Interaction concepts, Graphic design tools - Adobe Photoshop, Adobe XD, Blender, GIMP, Asset Design - Overview, Guidelines and norms, 2D/3D rendering, OpenGL, OSG.

Unit –IV 09 Hrs

**HMI** Interface: User-centered **HMI** development Web-Server. User process, Basics Web-based HMI: **Basics** of **TwinCAT** and HTML, CSS. JavaScript. HMI on Mobile: Four Principles of Mobile UI Design, Benefits of Mobile HMIs, Mobile HMI Development

Unit –V 09 Hrs

HMI Control Systems: Introduction to Voice-Based HMI, Gesture-Based HMI, Sensor-Based UI controls.

**Haptics in Automotive HMI**: Kinesthetic Feedback Systems, Tactile Feedback Systems, Haptics in Multimodal HMI, Automotive Use-Cases

**HMI Testing**: Limitations of Traditional Test Solutions, Case - Study: Bosch's HMI validation tool - Graphics Test Systems (GTS).

UI analytics: Usage patterns, Debugging, Performance Profiling, Use Cases.

Course	Course Outcomes: After completing the course, the students will be able to:-		
CO1	Understanding the application of HMIs in various domain.		
CO2	Comparison of various communication protocols used in HMI development.		
CO3	Apply and analyse the car multimedia system free software and hardware evolution.		
CO4	Design and evaluate the graphic tools and advanced techniques for creating car dashboard multimedia		
	systems.

P		3.0.0		SEE	•	100 Marks			

<b>Course Code</b>	:	EE266TEJ	CIE	:	100 Marks
Credits: L:T:P	:	3:0:0	SEE	:	100 Marks
<b>Total Hours</b>	:	45 L	<b>SEE Duration</b>	:	3 Hours

Unit-I 06 Hrs

**Types of Energy Audit and Energy-Audit Methodology:** Definition of Energy Audit, Place of Audit, Energy – Audit Methodology, Financial Analysis, Sensitivity Analysis, Project Financing Options, Energy Monitoring and Training.

**Survey Instrumentation:** Electrical Measurement, Thermal Measurement, Light Measurement, Speed Measurement, Data Logger and Data Acquisition System,

**Energy Audit of a Power Plant:** Indian Power Plant Scenario, Benefit of Audit, Types of Power Plants, Energy Audit of Power Plant.

Unit – II 10 Hrs

**Electrical-Load Management:** Electrical Basics, Electrical Load Management, Variable Frequency Drives, Harmonics and its Effects, Electricity Tariff, Power Factor, Transmission and Distribution Losses.

**Energy Audit of Motors:** Classification of Motors, Parameters related to Motors, Efficiency of a Motor, Energy Conservation in Motors, BEE Star Rating and Labelling.

Energy Audit of Pumps, Blowers and Cooling Towers: Pumps, Fans and Blowers, Cooling Towers

Unit -III 09 Hrs

#### **Communication & Standards:**

**Wireless technologies:** WPANs, LAN, Wireless metropolitan area network, cellular network, satellite communication, Zigbee, Bluetooth, LAN, NAN

**Wireline communication:** Phone line technology, powerline technology, coaxial cable technology; Optical communication, TCP/IP networks

Unit –IV 10 Hrs

**Energy Audit of Boilers:** Classification of Boilers, Parts of Boiler, Efficiency of a Boiler, Role of excess Air in Boiler Efficiency, Energy Saving Methods.

**Energy Audit of Furnaces:** Parts of a Furnace, classification of Furnaces, Energy saving Measures in Furnaces, Furnace Efficiency

**Energy Audit of Steam-Distribution Systems :** S team as Heating Fluid, Steam Basics, Requirement of Steam, Pressure, Piping, Losses in Steam Distribution Systems, Energy Conservation Methods

Unit-V 10 Hrs

**Energy Audit of Lighting Systems:** Fundamentals of Lighting, Different Lighting Systems, Ballasts, Fixtures (Luminaries), Reflectors, Lenses and Louvres, Lighting Control Systems, Lighting System Audit, Energy Saving Opportunities.

**Energy Audit Applied to Buildings:** Energy – Saving Measures in New Buildings, Water Audit, Method of Audit, General Energy – Savings Tips Applicable to New as well as Existing Buildings.

Course	Course Outcomes: After completing the course, the students will be able to: -				
CO 1	Explain the need for energy audit, prepare a flow for audit and identify the instruments needed.				
CO 2	Design and perform the energy audit process for electrical systems.				
CO 3	Design and perform the energy audit process for mechanical systems				
CO 4	Propose energy management scheme for a building

	Total Hours	:	45L	SEE Duration	:	03 Hrs

Unit-I 09 Hrs

**Fundamentals:** Sources of Biomedical signals, Basic medical instrumentation system, General constraints in design of medical instrumentation systems.

**Bioelectric Signals and Electrodes**: Origin of bioelectric signals, Types of bioelectric signals, Recording electrodes, Electrode-tissue interface, Polarization, Skin contact impedance, Silver-silver chloride electrodes, Electrodes for ECG, EEG, EMG, Microelectrodes.

Unit – II 09 Hrs

**Electrocardiograph:** Electrical activity of heart, Genesis and characteristics of Electrocardiograph (ECG), Block diagram description of an Electrocardiograph, ECG lead systems, Multi-channel ECG machine.

**Electroencephalograph:** Genesis of EEG, Block diagram description of an EEG, 10-20 Electrode system, Computerized analysis of EEG.

Unit –III 09 Hrs

**Patient Monitoring System:** Bedside monitors, Central Monitors, Measurement of Heart Rate, Average Heart Rate meter, Instantaneous heart rate meter, Measurement of pulse rate, Blood Pressure measurement, Direct and indirect method, Automatic blood pressure measuring apparatus using Korotkoff's method.

**Oximeters:** Oximetry, ear oximeter, pulse oximeter, skin reflectance oximeter and intravascular oximeter.

Unit –IV 09 Hrs

**Blood Flow Meters:** Electromagnetic blood flow meter, Types of electromagnetic blood flow meters, Ultrasonic blood flow meters, NMR blood flow meters, Laser Doppler blood flow meters.

**Cardiac Pacemakers and Defibrillators:** Need for Cardiac pacemaker, External Pacemaker, Implantable Pacemaker, Types of Implantable Pacemaker, Ventricular Synchronous Demand Pacemaker and Programmable Pacemaker. Need for a defibrillator, DC defibrillator, Defibrillator electrodes, DC defibrillator with synchronizer.

Unit –V 09 Hrs

**Advances in Radiological Imaging:** X-rays-principles of generation, Conventional X-ray radiography, Fluoroscopy, Angiography, Digital radiography, Digital subtraction angiography (DSA). Basic principle of computed tomography, magnetic resonance imaging system and Ultrasonic imaging system.

Course	e Outcomes: After completing the course, the students will be able to:-
CO1	Understand the sources of biomedical signals and basic biomedical instruments.
CO2	Apply concepts for the design of biomedical devices
CO3	Analyze the methods of acquisition and signal conditioning to be applied to the physiological parameters.
CO4	Develop instrumentation for measuring and monitoring biomedical parameters.

Semester: VI
TELECOMMUNICATION SYSTEMS
Category: INSTITUTIONAL ELECTIVES-I

(Group-E)

Course Code : ET266TEM CIE : 100 Marks
Credits: L:T:P : 3:0:0 SEE : 100 Marks
Total Hours : 45 L SEE Duration : 3 Hours

Unit-I 8 Hrs

**Introduction to Electronic Communication:** The Significance of Human Communication, Communication Systems, Types of Electronic Communication, Modulation and Multiplexing, Electromagnetic Spectrum, Bandwidth, A Survey of Communication Applications.

The Fundamentals of Electronics: Gain, Attenuation, and Decibels.

Radio Receivers: Super heterodyne receiver.

Unit – II 10 Hrs

**Modulation Schemes: Analog Modulation:** AM, FM and PM- brief review. **Digital Modulation:** PCM, Line Codes, ASK, FSK, PSK & QAM (Architecture).

Wideband Modulation: Spread spectrum, FHSS, DSSS.

Unit –III 10 Hrs

**Satellite Communication:** Satellite Orbits, Satellite Communication Systems, Satellite Subsystems, Ground Stations, Satellite Applications, Global Positioning System.

Unit –IV 9 Hrs

**Optical Communication:** Optical Principles, Optical Communication Systems, Fiber-Optic Cables, Optical Transmitters and Receivers, Wavelength-Division Multiplexing, Passive Optical Networks.

Unit –V 8 Hrs

**Cell Phone Technologies:** Cellular concepts, Frequency allocation, Frequency reuse, Internet Telephony.

**Wireless Technologies:** Wireless LAN, PANs and Bluetooth, Zig Bee, Mesh Wireless Networks, WiMax, and Wireless Metropolitan Area Networks.

Course	Course Outcomes: After completing the course, the students will be able to :-				
CO1	Describe the basics of communication systems.				
CO2	Analyze the importance of modulation and multiple access schemes for communication				
	systems.				
CO3	Analyze the operational concept of cell phone and other wireless technologies.				
CO4	Justify the use of different components and sub-system in advanced communication systems.

Unit-I 9 Hrs

**Principle of Cellular Communication:** Cellular Terminology, Cell Structure and Cluster, Frequency Reuse Concept, Cluster size and System Capacity, Method of Locating Co-channel cells, Frequency Reuse distance, Co-channel Interference and Signal Quality, Co-channel interference Reduction Methods.

Unit – II 9 Hrs

**Basic Cellular system:** Consideration of components of a cellular system- A basic cellular system connected to PSTN, Main parts of a basic cellular system, Operation of a Cellular system, Performance criteria- Voice quality, Trunking and Grade of Service, Spectral Efficiency of FDMA and TDMA systems

Unit –III 9 Hrs

**Second generation Cellular Technology: GSM:** GSM Network Architecture, Identifiers used in GSM System, GSM channels, Authentication and Security in GSM, GSM Call Procedure, GSM Handoff Procedures.

Unit –IV 9 Hrs

**3G Digital Cellular Technology: GPRS:** GPRS technology, GPRS NetworkArchitecture, GPRS signalling, Mobility Management in GPRS. **UMTS:** UMTS Network Architecture, UMTS Interfaces, UMTS Air Interface Specifications, UMTS Channels.

Unit –V 9 Hrs

**Wireless Personal Area Networks:** Network architecture, components, Bluetooth, Zigbee, Applications. **Wireless Local Area networks:** Network Architecture, Standards, Applications. Wireless Metropolitan Area Networks: IEEE 802.16 standards, advantages, WMAN Network architecture, Protocol stack

Course Outcomes: After completing the course, the students will be able to :-				
CO1	Describe the concepts and terminologies for Cellular Communication.			
CO2	Analyze the Architecture, Hand-off and Security aspects in 2G and 3G Networks.			
CO3	Compare the performance features of 2G and 3G Cellular Technologies.			
CO4	Analyze and Compare the architectures of various Wireless technologies and standards.

Credits: L:T:P	:	3:0:0		SEE	:	100 Marks
TotalHours	:	45L		SEE Duration	:	03 Hours

**Prerequisite:** - Programming in Java.

#### **Introduction:**

Smart phone operating systems and smart phones applications. Introduction to Android, Installing Android Studio, creating an Android app project, deploying the app to the emulator and a device. UI Design: Building a layout with UI elements, Layouts, Views and Resources, Text and Scrolling Views.

Activities and Intents, The Activity Lifecycle, Managing State, Activities and Implicit Intents, The Android Studio Debugger, Testing the Android app, The Android Support Library.

Unit-II 09 Hrs

#### **User experience:**

User interaction, User Input Controls, Menus, Screen Navigation, Recycler View, Delightful user experience, Drawables, Styles, and Themes, Material Design, Testing app UI, Testing the User Interface

Unit-III 09 Hrs

#### Working in the background:

Async Task and Async Task Loader, Connect to the Internet, Broadcast Receivers and Services. Scheduling and optimizing background tasks – Notifications, Scheduling Alarms, and Transferring Data Efficiently

Unit-IV 09 Hrs

#### All about data:

Preferences and Settings, Storing Data, Shared Preferences. Storing data using SQLite, SQLite Database. Sharing data with content providers.

Advanced Android Programming: Internet, Entertainment and Services. Displaying web pages and maps, communicating with SMS and emails, Sensors.

Unit-V 09 Hrs

#### **Hardware Support & devices:**

Permissions and Libraries, Performance and Security. Fire base and AdMob, Publish and Polish, Multiple Form Factors, Using Google Services.

Course	Course Outcomes: After completing the course, the students will be able to				
CO1:	Comprehend the basic features of android platform and the application development process.				
	Acquirefamiliarity with basic building blocks of Android application and its architecture.				
CO2:	Apply and explore the basic framework, usage of SDK to build Android applications				
	incorporating				
	Android features in developing mobile applications.				
<b>CO3:</b>	Demonstrate proficiency in coding on a mobile programming platform using advanced Android				
	technologies, handle security issues, rich graphics interfaces, using debugging and troubleshooting tools.				
<b>CO4:</b>	Create innovative applications, understand the economics and features of the app marketplace by				
	offering the applications for download.

# ELEMENTS OF FINANCIAL MANAGEMENT Category: INSTITUTIONAL ELECTIVES-I

(Group-E) (Theory)

Course Code: IM266TEQCIE: 100 MarksCredits: L:T:P: 3:0:0SEE: 100 MarksTotal Hours: 45LSEE Duration: 3.00 Hours

Unit-I 06 Hrs

Financial Decisions in a firm, Goals of a firm, Fundamental principle of

**Financial Management-An overview:** Financial Decisions in a firm, Goals of a firm, Fundamental principle of finance, Organization of finance function and its relation to other functions, Regulatory framework.

**The financial System:** Functions, Assets, Markets, Market returns, Intermediaries, regulatory framework, Growth and trends in Indian financial system.

Unit – II 10 Hrs

**Financial statements, Taxes and cash flow:** Balance sheet, statement of profit and loss, items in annual report, manipulation of bottom line, Profits vs Cash flows, Taxes. (**Conceptual treatment only**)

**Time Value of Money:** Future value of a single amount, future value of an annuity, present value of a single amount, present value of an annuity.

**Valuation of securities:** Basic valuation model, bond valuation, equity valuation-dividend capitalization approach and other approaches.

Unit –III 10 Hrs

**Risk and Return:** Risk and Return of single assets and portfolios, measurement of market risk, relationship between risk and return, implications.

**Techniques of Capital Budgeting:** Capital budgeting process, project classification, investment criteria, Net present value, Benefit-Cost ratio, Internal Rate of return, Payback period, Accounting rate of return.

(Conceptual and Numerical treatment)

Unit –IV 10 Hrs

**Long term finance:** Sources- Equity capital, Internal accruals, preference capital, term loans, debentures. Raising long term finance- Venture capital, Initial Public Offer, Follow on Public Offer, Rights Issue, Private Placement, Term Loans, Investment Banking

**Securities Market:** Primary market vs Secondary market, Trading and Settlements, Stock market quotations and Indices, Govt. securities market, Corporate debt market.

Unit –V 09 Hrs

Working Capital – Policy and Financing: Factors influencing working capital requirements, Current assets financing policy, operating cycle and cash cycle. Accruals, trade credit, banks, public deposits, inter-corporate deposits, short term loans, right debentures, commercial paper, Factoring

(Conceptual treatment only)

Cours	Course Outcomes: After completing the course, the students will be able to:-			
CO1	Explain the features and elements of a financial system.			
CO2	Recognize the relevance basic principles of financial management in decision making.			
CO3	Describe the processes and techniques of capital budgeting and working capital financing by organizations.			
CO4	Demonstrate an understanding of various sources of finance.

UNIT – I 08 Hrs

**Introduction:** OR Methodology, Definition of OR, Application of OR to Engineering and Managerial problems, Features of OR models, Limitations of OR.

**Linear Programming:** Definition, Mathematical Formulation, Standard Form, Solution Space, Types of solution – Feasible, Basic Feasible, Degenerate, Solution through Graphical Method. Problems on Product Mix, Blending, Marketing, Finance, Agriculture and Personnel.

**Simplex methods:** Variants of Simplex Algorithm – Use of Artificial Variables.

UNIT - II

09 Hr

**Simplex Algorithm:** How to Convert an LP to Standard Form, Preview of the Simplex Algorithm, Direction of Unboundedness, Why Does an LP Have an Optimal basic feasible solution, The Simplex Algorithm, Using the Simplex Algorithm to Solve Minimization Problems, Alternative Optimal Solutions, Degeneracy and the Convergence of the Simplex Algorithm, The Big M Method, The Two-Phase Simplex Method.

UNIT - III

09 Hrs

**Transportation Problem:** Formulation of Transportation Model, Basic Feasible Solution using North-West corner, Least Cost, Vogel's Approximation Method, Optimality Methods, Unbalanced Transportation Problem, Degeneracy in Transportation Problems, Variants in Transportation Problems.

**Assignment Problem:** Formulation of the Assignment problem, solution method of assignment problem-Hungarian Method, Variants in assignment problem, Travelling Salesman Problem (TSP).

UNIT – IV 09 Hrs

**Project Management Using Network Analysis:** Network construction, CPM & PERT, Determination of critical path and duration, floats. Crashing of Network. Usage of software tools to demonstrate N/W flow problems

UNIT – V 09 Hrs

**Game Theory**: Introduction, Two person Zero Sum game, Pure strategies, Games without saddle point - Arithmetic method, Graphical Method, The rules of dominance

Cours	Course Outcomes: After going through this course the student will be able to			
CO1	Understand the characteristics of different types of decision – making environments and the			
	appropriate decision making approaches and tools to be used in each type.			
CO2	Build and solve Transportation Models and Assignment Models.			
CO3	Design new simple models, like: CPM, PERT to improve decision –making and develop critical thinking and			
	objective analysis of decision problems.			
CO4	Implement practical cases, by using TORA, WinQSB, Excel, GAMS.

Unit-I	09 Hrs

#### **Automobile Engines**

Classifications of Internal Combustion Engines. Engine nomenclature and mechanics. Mixture formation – External, internal, quality and quantity control – homogeneous and stratified injection. Thermodynamic principles of Otto and Diesel cycle. Characteristics – pressure curve and energy yield, engine speed, torque, and power

Unit-II 10 Hrs

#### **Engine Auxiliary Systems:**

Turbocharger, Intercooler, Exhaust manifold, 3-way catalytic convertor, Exhaust Gas Recirculation system. **Common Rail Fuel Injection system**- Low pressure and high pressure fuel systems, Return line, Quantity control valve and Injectors.

Unit-III 10 Hrs

#### Vehicular Auxiliary Systems:

Vehicle frame and body classification- Hatchback, Sedan, SUV, Coupe, Roadster. Adaptive Brakes - Disc and drum brakes, Antilock Braking Systems, ESP, TCS. Wheels and Tyres- Toe-In, Toe-Out, Caster and Camber angle. Classification of tyres, Radial, Tubeless.

**Supplemental Restraint System**: Active and passive safety, Vehicle structure, Gas generator and air bags, Belt Tensioner, Acceleration sensor, Rollover sensor, Seat occupancy recognition.

Unit-IV 09 Hrs

**EV Technology**: Types of EV's, ICE vs EV torque output, Architecture and Working of EV's.

Battery Thermal Management System, Regenerative braking, Safety system and Impacts of EV on the environment.

Unit-V 07 Hr

**Telematics in vehicles** – Radio Transmission, Exchange of information, signal path & properties, Concept of radio waves.

**Sensors:** Oxygen sensors, Crankshaft/Cam shaft Sensor, Boost Pressure Sensor, Coolant Temperature Sensor, Hot Film Air Mass flow Sensor, Throttle Position Sensor, Rain/Light sensor

Course Outcomes: After completing the course, the students will be able to						
CO1:	CO1: Describe the functions of Mechatronic systems in a modern automobile					
CO2: Evaluate the performance of an engine by its parameters						
CO3:	Analyse the automotive exhaust pollutants as per emission norms					
<b>CO4:</b>	Demonstrate communication of control modules using a On-Board Diagnostic kit

				Semester: VATHEMATICAL M ry: INSTITUTIONA (Group-E (Theory)	ODELLING L ELECTIVES-I		
Coı	ırse Code	:	MA266TEU		CIE	:	100 Marks
Cre	edits: L:T:P	••	3:0:0		SEE	:	100 Marks
Tot	al Hours	••	45L		<b>SEE Duration</b>	:	<b>3.00 Hours</b>
Cou	irse Learning	Ob	jectives: The studen	ts will be able to			
1	Understand th	e b	asic procedure of ma	athematical modeling	i		
2	Use the conce	pts	of continuous and d	iscrete process mode	s to the problems a	risin	g in various fields.
3	3 Apply the concepts of Markov modelling to stochastic problems.						
4	Demonstrate of	lem	onstrate the practica	al importance of grap	h theoretic models,	vari	ational problem and dynamic
	programming.						

Unit-I	09 Hrs
Introduction to Mathematical Modelling:	
Basic concepts, steps involved in modelling, classification of models, assorted simple mathematic	cal models
from diverse fields.	
Unit – II	09 Hrs
Mathematically Modelling Discrete Processes:	
Difference equations - first and second order, Introduction to Difference equations, Introduction	to discrete models-
simple examples, Mathematical modelling through difference equations in economics, finance, po	pulation dynamics,
genetics and other real world problems.	
Unit –III	09 Hrs
Markov modelling:	
Mathematical foundations of Markov chains, application of Markov Modelling to problems.	
Unit –IV	09 Hrs
Modelling through graphs:	
Graph theory concepts, Modelling situations through different types of graphs.	
Unit –V	09 Hrs
Variational Problem and Dynamic Programming:	•
Optimization principles and techniques, Mathematical models of variational problem and dyna	amic programming,
Problems with applications.	2 2

Course	Course Outcomes: After completing the course, the students will be able to						
<b>CO1:</b>	Explore the fundamental concepts of mathematical models arising in various fields engineering.						
CO2:	Apply the knowledge and skills of discrete and continuous models to understand various types of						
	analysis.						
<b>CO3:</b>	Analyze the appropriate mathematical model to solve the real world problem and to optimize the						
	solution.						
<b>CO4:</b>	Distinguish the overall knowledge gained to demonstrate the problems arising in many practical						
	situations.

# APPLIED PSYCHOLOGY FOR ENGINEERS Category: INSTITUTIONAL ELECTIVES-I

(Group-E) (Theory)

<b>Course Code</b>		HSS266TEW	CIE	:	100 Marks
Credits: L:T:P	:	3:0:0	SEE	:	100 Marks
<b>Total Hours</b>	:	45 Hrs	<b>SEE Duration</b>	:	3 Hours

Unit-I 08 Hrs

**Introduction to Psychology**: Definition and goals of Psychology: Role of a Psychologist in the Society: Today's Perspectives (Branches of psychology- Clinical, Industrial). Psychodynamic, Behavioristic, Cognitive, Humanistic, Psychological Research and Methods to study Human Behavior: Experimental, Observation, Questionnaire and Clinical Method.

Unit – II 08 Hrs

**Intelligence and Aptitude:** Concept and definition of Intelligence and Aptitude, Nature of Intelligence. Theories of Intelligence – Spearman, Thurston, Guilford Vernon. Characteristics of Intelligence tests, Types of tests. Measurement of Intelligence and Aptitude, Concept of IQ, Measurement of Multiple Intelligence – Fluid and Crystallized Intelligence.

Unit –III 10 Hrs

**Personality**: Concept and definition of personality, Approaches of personality- psychoanalytical, Socio-Cultural, Interpersonal and developmental, Humanistic, Behaviorist, Trait and type approaches. Assessment of Personality: Self- report measures of Personality, Questionnaires, Rating Scales and Projective techniques, its Characteristics, advantages & limitations, examples. Behavioral Assessment.

Unit –IV 10 Hrs

**Learning:** Definition, Conditioning – Classical Conditioning, Basics of Classical Conditioning (Pavlov), the process of Extinction, Discrimination and Generalization. Operant Conditioning (Skinner expt). The basics of operant conditioning, Schedules of reinforcement. Cognitive – Social approaches to learning – Latent Learning, Observational Learning, Trial and Error Method, Insightful Learning.

Unit -V 09 Hrs

**Application of Psychology in Working Environment:** The present scenario of information technology, the role of psychologist in the organization, Selection and Training of Psychology Professionals to work in the field of Information Technology. **Psychological Stress:** a. Stress- Definition, Symptoms of Stress, Extreme products of stress v s Burnout, Work Place Trauma. Causes of Stress – Job related causes of stress. Sources of Frustration, Stress and Job Performance, Stress Vulnerability-Stress threshold, perceived control. Type A and Type B.**Psychological Counseling** - Need for Counseling, Types – Directed, Non-Directed, Participative Counseling.

Course	Course Outcomes: After completing the course, the students will be able to:-					
CO1	Describe the basic theories, principles, and concepts of applied psychology as they relate to					
	behaviors and mental processes.					
CO2	Define learning and compare and contrast the factors that cognitive, behavioral, and Humanistic					
	theorists believe influence the learning process.					
CO3	Develop understanding of psychological attributes such as intelligence, aptitude, creativity					
	resulting in their enhancement and apply effective strategies for self-management and self-					
	improvement.					
CO4	Apply the theories into their own and others' lives in order to better understand their personalities					
	and experiences.					
CO5	Understand the application of psychology in engineering and technology and develop a route to					
	accomplish goals in their work environment.

Unit-I 10 Hrs

Introduction-Basic Human Aspiration, its fulfillment through All-encompassing Resolution. The basic human aspirations and their fulfillment through Right understanding and Resolution, Right understanding and Resolution are the activities of the Self, Self is central to Human Existence; All-encompassing Resolution for a Human Being, its details and solution of problems in the light of Resolution.

Unit – II 10 Hrs

Right Understanding (Knowing)- Knower, Known & the Process. The domain of right understanding starts from understanding the human being (the knower, the experiencer and the doer); and extends up to understanding nature/existence – its interconnectedness and co-existence; and finally understanding the role of human being in existence (human conduct).

Unit –III 08 Hrs

Understanding Existence (including Nature). A comprehensive understanding (knowledge) about the existence, which certainly includes the Nature. The need and the process of inner evolution (through self-exploration, self-awareness and self-evaluation)- particularly awakening to activities of the Self: Realization, Understanding and Contemplation in the Self (Realization of Co-Existence, Understanding of Harmony in Nature and Contemplation of Participation of Human in this harmony/ order leading to comprehensive knowledge about the existence).

Unit –IV 08 Hrs

Understanding Human Being. Understanding the human being comprehensively is the first step and the core theme of this course; human being as co-existence of the self and the body, the activities and potentialities of the self, Reasons for harmony/contradiction in the self.

Unit –V 08 Hrs

Understanding Human Conduct, All-encompassing Resolution & Holistic Way of Living. Understanding Human Conduct, Understanding different aspects of All-encompassing Resolution (understanding, wisdom, science etc.), Holistic way of living for Human Being with All-encompassing Resolution covering all four dimensions of human endeavour viz., realization, thought, behavior and work (participation in the larger order) leading to harmony at all levels from self to Nature and entire Existence.

Course	Course Outcomes: After completion of the course the students will be able to					
CO1	CO1 Understand the basic human aspiration with program of its fulfilment and meaning of					
	resolution in the complete expanse of human living.					
CO2	Understand human being in depth and see how self is central to human being					
CO3	Understand existence in depth and see how coexistence is central to existence					
CO4	Understand human conduct and the holistic way of living leading to human tradition

INTERDISCIPLINARY PROJECT						
Course Code	:	CS367P		CIE	:	50Marks
Credits: L:T:P	:	0:0:3		SEE	:	50Marks
Total Hours	:	15 P		SEE Duration	:	2Hours

#### **Major Project Guidelines:**

- 1. The project topic, title and synopsis have to be finalized and submitted to the irrespective internal guide(s) before the beginning of the VI semester.
- 2. The detailed Synopsis (approved by the department *Project Review Committee*) has to be submitted during the 1<sup>st</sup> week after the commencement of VI semester.

#### **Batch Formation:**

- > Students are free to choose their project partners from any other program.
- Each student in the team must contribute towards the successful completion of the project. The project may be carried out In-house only.
- The project work is to be carried out by a team of two to four students.

#### **Project Topic Selection:**

The topics of the project work must be in the *field of Sustainable Development goals areas or in line with CoE's (Centre of Excellence) identified by the college* or List of project are as given by Faculty. The projects as far as possible should have societal relevance with focus on sustainability.

#### **Project Evaluation:**

Continuous monitoring of project work will be carried out and cumulative evaluation will be done.

- The students are required to meet their guides once in a week to report their progress in project work.
- **Weekly Activity Report** (WAR) has to be maintained in the form of a diary by the project batch and the same has to be discussed with the Guide regularly.
- > For CIE assessment the project groups must give a final presentation with the draft copy of the project report.
- ➤ The presentation by each group will be for 20-30 minutes and every member of the team needs to justify the contributions to the project.
- ➤ The project team is required to submit Hard copies of the detailed Project Report in the prescribed format to the department.
- For CIE 50% weightage should be given to the project guide and 50% weightage to the project evaluation committee.

	Course Outcomes:				
1	Identifying critical thinking and problem-solving abilities by analyzing and addressing				
	interdisciplinary challenges, utilizing creative approaches and innovative solutions.				
2	Exhibit proficiency in conducting comprehensive research, including literature review, data				
	collection, modelling, simulation, and analysis, to address significant technical challenges and				
	propose innovative solutions.				
3	Demonstrate the ability to do effective teamwork, leadership, project management, and				
	communication skills, while adhering to ethical standards and professional responsibility in				
	delivering the project outcomes within time and budget constraints.				
4	Utilize appropriate engineering tools, technologies, and software to design, test, and implement				
	project solutions, ensuring adherence to technical specifications, safety standards, and industry best				
	practices.				

#### **CIE Assessment:**

The following are the weightings given for the various stages of the project.

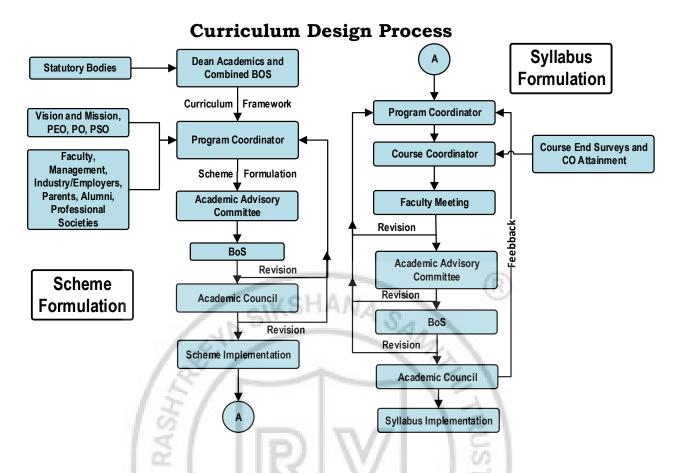

1.	Selection of the topic and formulation of objectives	10%
2.	Design and Development of Project methodology	25%
3.	Execution of Project	25%
4.	Presentation, Demonstration and Results Discussion	30%
5.	Report Writing & Publication	10%

#### **SEE Assessment:**

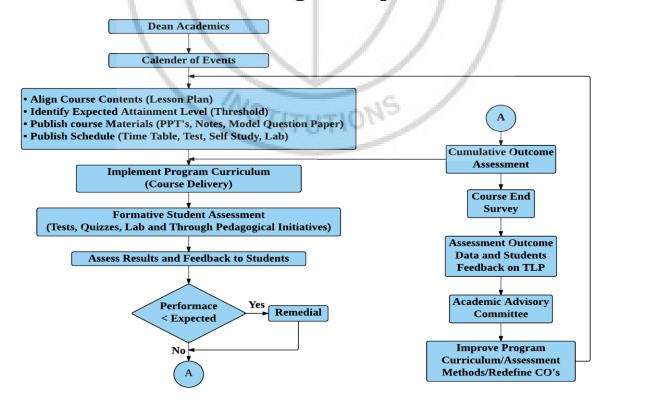

The following are the weightages given during Viva Examination.

1.	Written presentation of synopsis	10%
2.	Presentation/Demonstration of the project	30%
3.	Methodology and Experimental Results & Discussion	30%
4.	Report	10%
5.	Viva Voce	20%

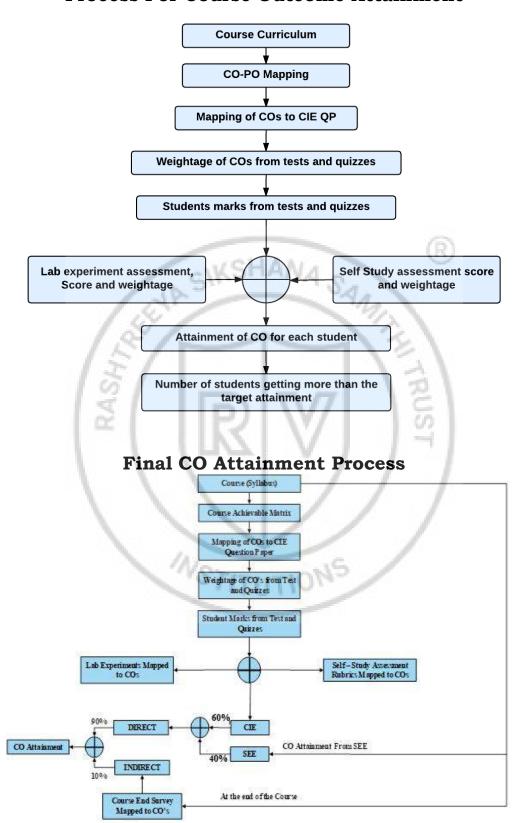

### **Academic Planning and Implementation**

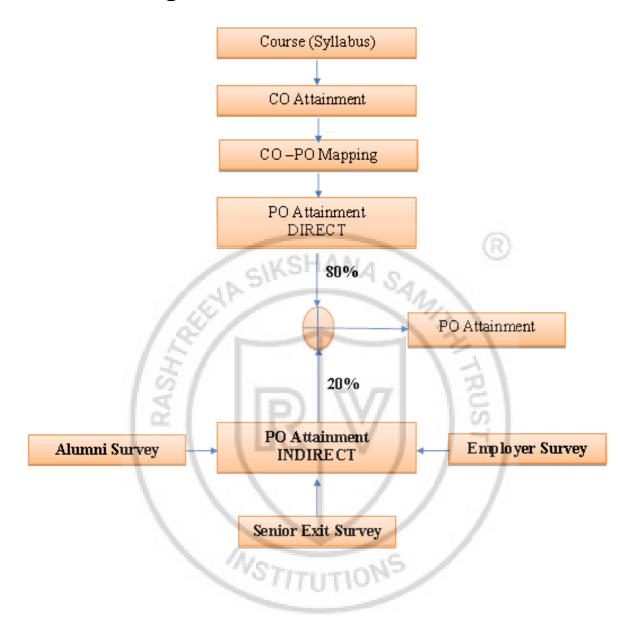

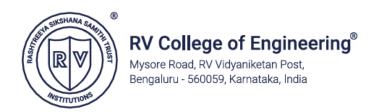

#### **Process For Course Outcome Attainment**

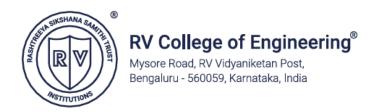

### **Program Outcome Attainment Process**

### **KNOWLEDGE & ATTITUDE PROFILE**

- **WK1:** A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
- **WK2:** Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
- **WK3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
- **WK4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.
- **WK5:** Knowledge, including efficient resource use, environmental impacts, whole-life cost, re-use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
- **WK6:** Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
- **WK7:** Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.
- **WK8:** Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
- **WK9:** Ethics, inclusive behaviour and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

### **PROGRAM OUTCOMES (POs)**

- ❖ **PO1:** Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
- ❖ **PO2:** Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
- \* **PO3:** Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
- ❖ **PO4:** Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
- \* **PO5:** Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
- ❖ **PO6**: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- ❖ **PO7:** Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- \* **PO8:** Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- ❖ PO9: Communication: Communicate effectively and inclusively within the community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
- \* **PO10:** Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- ❖ **PO11:** Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

### **INNOVATIVE TEAMS OF RVCE**

**Ashwa Mobility Foundation (AMF):** Designs and fabricates Formula-themed race cars and mobility solutions to address urban transportation issues.

Astra Robotics Team: Focuses on designing and building application-specific robots.

Coding Club: Helps students gain coding skills and succeed in competitions like GSoC and ACM-ICPC.

**Entrepreneurship Development Cell (E-Cell):** Promotes entrepreneurship through workshops, speaker sessions, and mentoring for startups.

Frequency Club Team: Works on software and hardware, emphasizing AI and Machine Learning.

Team Garuda: Develops a supermileage urban concept electric car and E-mobility products.

**Team Jatayu:** Builds low-cost UAVs with autonomous capabilities for various tasks.

Solar Car Team: Aims to create a solar electric vehicle for sustainable transportation.

**Team Antariksh:** Focuses on space technology and the development of operational rockets.

Team Chimera: Builds a Formula Electric Car through R&D in E-Mobility.

**Helios Racing Team:** Designs and tests All-Terrain Vehicles, participating in SAE's BAJA competitions.

**Team Hydra:** Develops autonomous underwater vehicles for tasks like water purification.

**Team Krushi:** Creates low-cost farming equipment to assist farmers in cultivation and harvesting.

Team Vyoma: Designs and tests radio-controlled aircraft and UAVs.

**Team Dhruva:** Engages in astronomy-related activities and collaborates on projects with organizations like ICTS and IIA.

**Ham Club:** Promotes Amateur Radio and explores technical innovations in communications, especially for disaster response.

#### **Cultural Activity Teams**

- AALAP (Music club)
- 2. DEBSOC (Debating society)
- 3. CARV (Dramatics club)
- 4. FOOTPRINTS (Dance club)
- QUIZCORP (Quizzing society)
- 6. ROTARACT (Social welfare club)
- 7. RAAG (Youth club)
- 8. EVOKE (Fashion team)
- f/6.3 (Photography club)
- 10. CARV ACCESS (Film-making

NSS of RVCE NCC of RVCE

Leadership in Quality Technical Education, Interdisciplinary Research & Innovation, with a Focus on Sustainable and Inclusive Technology

- To deliver outcome based Quality education, emphasizing on experientiallearning with the state of the art infrastructure.
- To create a conducive environment for interdisciplinary research and innovation.
- To develop professionals through holistic education focusing on individual growth, discipline, integrity, ethics and social sensitivity.
- To nurture industry-institution collaboration leading to competency enhancement and entrepreneurship.
- To focus on technologies that are sustainable and inclusive, benefiting all sections of the society.

Achieving Excellence in Technical Education, Research and Consulting through an Outcome Based Curriculum focusing on Continuous Improvement and Innovation by Benchmarking against the global Best Practices.

Professionalism, Commitment, Integrity, Team Work, Innovation
