

Here are the answers to the model question paper, drawing on the provided sources:

RV COLLEGE OF ENGINEERING® Autonomous Institution affiliated to VTU

VI Semester B. E. (2022 Scheme)

UNIVERSAL HUMAN VALUES – II (INSTITUTIONAL ELECTIVE)

Model Question Paper

PART-A

1.1 Explain how "Right understanding" is key to fulfilment of human aspirations.

The basic human aspiration is the **continuity of happiness and prosperity**. This fundamental need of the self is primarily fulfilled by **right understanding, right feeling, and right thought**, which are activities of the self. The sources state that **right understanding is the first priority** for ensuring continuous happiness and prosperity, forming the foundation for fulfilling relationships and correctly identifying physical needs to achieve prosperity. Without right understanding, attempts to achieve happiness solely through physical facilities are bound to fail, leading to problems.

1.2 Describe the aspect "Self as central to Human Existence".

The **Self (I) is central to human existence**, with the body serving merely as its instrument. The self is identified as the **knower, the seer, the doer, and the experiencer**. Crucially, the fundamental human aspiration for **continuous happiness is the need of the self**, and its fulfilment is achieved through the self's own activities of right understanding, right feeling, and right thought. Any major work related to a human being's happiness or unhappiness, and the certainty or uncertainty in their conduct, ultimately originates and takes place at the level of the self.

1.3 Define "Right Understanding" and its distinct character as opposed to mere knowledge.

Right understanding means to see the reality as it is, in its completeness, referred to as 'knowing'. It involves perceiving five aspects of any unit: its form, property, **natural characteristic, innateness, and co-existence**.

Its distinct character from mere knowledge lies in its focus on the **definite, continuous, and universal** aspects of reality – namely, the natural characteristic, innateness, and co-existence – rather than just the variable form and property. These deeper aspects are understood through the awakening of the self's higher activities: **contemplation, understanding, and realisation**.

1.4 Explain the influence of understanding the "Known" in relation to Right Understanding.

In the context of right understanding, the "Known" refers to the **entire existence**, which encompasses the knowledge of the **human being, existence itself, and human conduct**. Understanding the "Known" is achieved by awakening the self's higher activities of contemplation, understanding, and realisation, which provide clarity about the natural characteristic, innateness, and co-existence of all units in nature. This comprehensive understanding directly **influences human behaviour and decision-making**, leading to definite conduct and purposeful actions that are in line with the existential order.

1.5 Enlist any two examples for physical order and bio order.

- **Physical order:** Soil, Metal
- **Bio order:** Plants, Trees

1.6 The innateness of physical order and bio order is _____ and _____ respectively.

The innateness of physical order is **Existence** and bio order is **Existence and Growth**.

1.7 The knowledge of human being is the coexistence of _____ and _____.

The knowledge of human being is the coexistence of **Self** and **Body**.

1.8 Enlist the two primal activities to be ensured when self, body is ready to leave in harmony with the outside world.

When the self is in a state of harmony and ready to interact with the outside world, the two primal activities to be ensured are:

- **Behaviour leading to mutual happiness** in interactions with other human beings.
- **Work leading to mutual prosperity** in interactions with the rest of nature.

1.9 Define "Understanding Human Conduct" in the context of personal development and societal harmony?

Understanding human conduct involves gaining clarity on "**what to do as a human being**" and "**what not to do as a human being**". It encompasses understanding human values, policy, and character.

- **Personal Development:** For personal development, understanding human conduct means aligning the self's desires, thoughts, and expectations with the clarity of relationship, harmony, and co-existence. This guidance leads to **harmony within the self**, resulting in continuous happiness, peace, satisfaction, and bliss. It enables the self to be self-organised and act with definiteness.
- **Societal Harmony:** In the context of societal harmony, understanding human conduct leads to its expression as **behaviour ensuring mutual happiness (justice)**, **work ensuring mutual prosperity (preservation)** with nature, and **participation in the**

larger order for the fulfilment of human goals. This ultimately fosters an **undivided human society** and a **universal human order**.

1.10 Describe four dimensions of human endeavour.

Four dimensions of human endeavour, as part of the five dimensions of Universal Human Order, include:

- **Education – Sanskar:** To build competence for right understanding, thought, and behaviour.
- **Health – Sanyam:** To ensure the health and well-being of the human body.
- **Production – Work:** To ensure physical facility through labour on nature.
- **Justice – Preservation:** To ensure recognition and fulfilment of relationships leading to mutual happiness and protecting resources.

PART-B

2a. Elaborate on the stepwise attainment towards clarity of resolution.

Resolution, essentially, means **right feeling and right thought** within the self, leading to the continuity of happiness. It involves achieving clarity across nine fundamental aspects of human existence, which unfold in a stepwise manner:

1. **Right Understanding (Gyan):** This is the foundational step, achieved purely at the level of the self (Block B1). It involves gaining clarity about **co-existence, harmony, and relationship** in existence. This clarity is attained through the awakening of the self's higher activities:
 - **Realisation:** Clarity about co-existence, seeing units submerged in space.
 - **Understanding:** Clarity about harmony in nature, encompassing the self-organisation and innateness of every unit.
 - **Contemplation:** Clarity about relationship, natural characteristics, and one's participation in the larger order.
2. **Wisdom:** Building upon right understanding, wisdom is the **identification of the human goal** – essentially, determining "what to do" and "what not to do" as a human being. This goal must align with the inherent existential order and emerges from the contemplation of one's participation in the larger order.
3. **Science:** With the human goal identified (wisdom), science outlines "**how to fulfil the human goal**". This involves detailing the **plan, program, implementation, results, and evaluation**. This process primarily occurs at the level of the self's imagination

(Block B2), guided by the clarity from wisdom and right understanding. Science encompasses three components: the science of behaviour, the science of work, and the science of participation in the larger order.

These first three aspects (Right Understanding, Wisdom, and Science) are purely internal to the self and are the direct **source of continuous happiness**. The remaining six aspects are the natural expressions and expansions of this internal harmony:

4. **Behaviour:** With inner resolution, human behaviour expresses as **justice, leading to mutual happiness** in human-human relationships, expanding from the family to the world family.
5. **Work:** Work transforms into **mutual enrichment and preservation** with the rest of nature, ensuring mutual prosperity.
6. **Participation in Larger Order:** This involves participating in societal systems and dimensions of human order to **fulfil the human goal**, expanding from the family order to the world family order.
7. **Undivided Human Society:** The collective expression of human behaviour based on right understanding leads to an **undivided human society**, where relationships are universally acknowledged and fulfilled with love and trust.
8. **Universal Human Order:** Through participation in the larger order and living in harmony with nature, the **universal human order** is materialised, covering all units from family to the world family.
9. **Human Tradition:** The continuity of the undivided human society and universal human order across generations leads to a **human tradition**, ensuring the fulfilment of the human goal in perpetuity. This complete cycle, often starting with human education, ensures self-sustaining harmony and fulfilment.

2b. Explain the significance of the Self in the context of human aspirations and Resolution. How does understanding the Self contribute to achieving personal and societal goals?

The **Self (I)** holds a paramount position in human existence, being central to our aspirations and the attainment of resolution.

Significance of the Self in Human Aspirations: The core human aspiration is the **continuity of happiness**. This fundamental need is **inherent to the self**. The sources state that happiness is not obtained from outside but is the **innate nature of the self**. The fulfilment of this aspiration directly depends on the self's internal state, achieved through **right understanding, right feeling, and right thought**, all of which are activities of the self. The self is not merely a passive entity; it is the **knower, seer, doer, and experiencer** of its own reality and the world around it. Any variation or certainty in human conduct and feelings originates from the self's capacity for knowing and assuming.

Significance of the Self in Resolution: Resolution is defined as the **right feeling and right thought** in the self, leading to a state of inner harmony and continuous happiness. The entire process of attaining clarity across the **nine aspects of resolution** (Right Understanding, Wisdom, Science, Behaviour, Work, Participation in Larger Order, Undivided Human Society, Universal Human Order, Human Tradition) begins and is cultivated within the self. The initial three crucial aspects – Right Understanding, Wisdom, and Science – are **purely activities of the self**, serving as the direct source of the self's continuous happiness.

Contribution to Achieving Personal and Societal Goals:

- **Personal Goals:** Understanding the self is the bedrock of personal transformation.
 - It initiates the shift from **animal consciousness** (where imagination is guided by preconditioning and sensation, leading to uncertainty and temporary happiness) to **human consciousness** (where imagination is guided by right understanding).
 - This internal alignment brings about **harmony within the self**, leading to a state of **continuous happiness** manifested as bliss, satisfaction, peace, and happiness.
 - The self, by awakening its higher activities (contemplation, understanding, realisation), gains the capacity to guide its desires and thoughts towards definite and fulfilling goals, such as living in relationship, harmony, and co-existence.
- **Societal Goals:** A transformed self forms the foundation for a harmonious society.
 - Human consciousness, rooted in the understanding of the self, provides the **basis for ensuring justice and order**, which are essential for an **undivided human society and universal human order**.
 - The self's right understanding, feelings, and thoughts naturally express themselves through **definite behaviour, work, and participation in the larger order**.
 - This leads to **mutual happiness** in human-human relationships (justice) and **mutual prosperity** in human-nature interactions, directly contributing to societal well-being and the fulfilment of human goals.
 - Ultimately, the self's internal clarity and harmony are the driving force behind overcoming societal problems like exploitation, domination, and conflict, moving towards a humane and co-existent global order.

3a. Explore the role of the human being as the Knower, Experiencer, and Doer in the domain of Right Understanding.

In the domain of Right Understanding, the human being, specifically the Self (I), plays a multifaceted role as the **Knower, Experienter, and Doer**. This comprehensive understanding of the self is crucial, as it is the self that engages with reality.

- **The Self as the Knower (Seer):**

- The self is the entity that **understands, observes, and seeks knowledge**, using the body as an instrument for sensation but directly engaging in the process of knowing.
- **Knowing** is defined as seeing the reality as it is, in its completeness, through direct observation. The self has the innate potential to perceive all five aspects of a unit: its form, property, **natural characteristic, innateness, and co-existence**.
- The process of knowing, particularly of the definite, continuous, and universal aspects (natural characteristic, innateness, co-existence), involves the **awakening of the self's higher activities: contemplation, understanding, and realisation**.
- This knowing provides a **definite and universal basis** for the self's assumptions, leading to definite recognition and fulfilment in its interactions and thus definite conduct.

- **The Self as the Experienter (Enjoyer):**

- The self is the one that **experiences the outcomes of its decisions and actions**, primarily in terms of **happiness or unhappiness**.
- When the self's imagination (desire, thought, expectation) is guided by the clarity derived from right understanding (i.e., contemplation, understanding, and realisation), the self is in a state of **harmony within**.
- This internal harmony leads to the experience of **continuous happiness**, which is further articulated as bliss (from realisation), satisfaction (from contemplation of desires), peace (from thoughts/analysing), and happiness (from selecting/tasting).
- Conversely, without right understanding, the self experiences contradiction, leading to temporary happiness, excitement, or unhappiness and depression, fluctuating between excitement and escape.

- **The Self as the Doer:**

- The self is the **decision-maker**. It decides its own feelings, what instructions to give to the body, and when to read sensations from the body, treating the body as its instrument.

- With right understanding, the self's desires become definite (e.g., to live in relationship, harmony, co-existence), and its thoughts are guided by this clarity.
- This internal clarity and definiteness lead to a **definite external expression through human conduct**:
 - **Behaviour** with other human beings leads to mutual happiness (justice).
 - **Work** with the rest of nature leads to mutual prosperity (preservation).
 - **Participation** in the larger order contributes to the fulfilment of the human goal and universal human order.
- Thus, the self, through its awakened knowing, directs its doing to ensure harmonious living, which in turn leads to the experience of continuous happiness.

3b. Discuss the concept of interconnectedness and co-existence in nature/existence as an essence of co-existence.

The sources highlight that **existence is fundamentally co-existence**, defined as **units submerged in space**. This foundational reality of co-existence manifests as **interconnectedness and harmony** throughout nature, making it the very essence of existence.

- **Co-existence as Ever-Present:**
 - Co-existence is **present for all time and space**, without any exception. This means that every unit in nature, from the smallest atom to the largest heavenly bodies, is continuously **energised, active, self-organised, and actively recognises and fulfils its relationship with other units**, all within the expanse of space.
 - **Space** itself is not merely an absence or void but is an **all-pervading reality**, unbounded in time and space, providing the very foundation and medium within which units exist, interact, and demonstrate their relationships and harmony.
- **Co-existence as Ever-Effective:**
 - The principle of co-existence **applies universally and consistently to every reality**, from the microscopic level of sub-atomic particles to macroscopic entities and the entire nature as a whole.

- For instance, an atom is a co-existence of sub-atomic particles, a molecule is a co-existence of atoms, and a human being is a co-existence of the self and the body. A tree similarly exemplifies co-existence through its various parts.
- This inherent effectiveness ensures that every unit is **self-organised and exists in a definite order**, with definite conduct and participation.
- **Co-existence as Ever-Expressing:**
 - Co-existence is not static; it is **continually unfolding and manifesting itself in diverse forms**.
 - A primary expression of this is the classification of all units in nature into **four orders: physical, bio, animal, and human**. Despite their apparent variety, all these units are fundamentally related as expressions of the same underlying co-existence.
 - This expression further translates into the distinct **activity, innateness (self-organisation), and natural characteristics (participation in larger order)** for each of these four orders.
 - For example, the innateness of existence in the physical order, growth in the bio-order, and the will to live with continuous happiness in the human order are all expressions of this fundamental co-existence.
 - The continuity of human tradition, ensuring the fulfilment of human goals across generations, is also a process of this ongoing unfolding of co-existence through human education and conduct.

Understanding co-existence as ever-present, ever-effective, and ever-expressing leads to profound insights. It enables the self to perceive reality not as fragmented or in opposition, but as an inherently harmonious and interconnected whole. This perspective cultivates feelings of relationship and responsibility with all units in existence, laying the groundwork for ethical living and social harmony.

4a. How does this understanding influence human behavior and decision making?

Understanding the inherent co-existence, harmony, and relationship in existence profoundly influences human behaviour and decision-making by guiding the self's internal activities and external expressions.

Influence on Internal Decision Making (within the Self):

1. **Guidance of Imagination:** When the self's higher activities of **contemplation, understanding, and realisation** are awakened (i.e., right understanding is established), they begin to **guide the lower activities of imagination** (desire, thought, and expectation). This is a fundamental shift from the self being guided by

temporary preconditioning and sensation (animal consciousness) to being guided by definite natural acceptance and existential truths (human consciousness).

2. **Definite Desires:** Desires, which were previously fluctuating and unguided, become **definite and consistent**, aligning with the aspiration to live in relationship, harmony, and co-existence.
3. **Rational Thinking (Analysing-Comparing):** The basis of thought and analysis shifts from fleeting sensations, health (consumption), or profit, to the **definite principles of co-existence, harmony, and justice**. This means decisions are made with a comprehensive understanding of their impact on all levels of living.
4. **Purposeful Selection (Selecting-Tasting):** Choices are no longer solely sensation-based (e.g., eating merely for taste). Instead, they are guided by **human goals and values**, ensuring that actions serve the larger purpose of nurturing the body, fostering relationships, and sharing knowledge and feelings. Sensations are rightly utilised rather than becoming a source of unguided indulgence.
5. **Internal Harmony:** This internal alignment and definite decision-making lead to a state of **continuous happiness within the self**, experienced as bliss, satisfaction, peace, and happiness.

Influence on External Behaviour (Decision Making Expressed Outside): The internal harmony and definite conduct translate into purposeful and mutually fulfilling actions in the external world:

1. **Behaviour (Human-Human Interaction):** Human behaviour becomes consistently guided by the understanding of relationship, harmony, and co-existence, leading to **mutual happiness (justice)**. This fosters an **undivided human society** where individuals act from a feeling of love and being related to all, transcending narrow self-interest or exploitation.
2. **Work (Human-Nature Interaction):** Work with the rest of nature is no longer exploitative but aims for **mutual prosperity (preservation)**. This involves producing physical facilities using cyclic and mutually enriching processes (eco-friendly) and ensuring ethical treatment of all involved (people-friendly). It leads to a clear identification of physical needs and right utilisation, avoiding over-consumption and resource depletion.
3. **Participation in Larger Order:** Participation in societal systems (e.g., education, health, justice) becomes constructive and consistent, aiming for the **fulfilment of the human goal** and the materialisation of a **universal human order**.

In essence, right understanding empowers human beings to move from a state of confusion, reaction, and problems (characteristic of animal consciousness and an inhuman society) to a

state of definite, responsible, and mutually fulfilling living, aligning human existence with the inherent harmony of the larger existence.

4b. "Right understanding fosters ethical behavior and social harmony" – Justify the statement.

The statement that "Right understanding fosters ethical behavior and social harmony" is strongly justified by the principles outlined in the sources. Right understanding fundamentally means **seeing reality as it is, in its completeness**, particularly discerning the **definite, continuous, and universal aspects** such as natural characteristics (relationship), innateness (harmony), and co-existence (submergence). This understanding is achieved through the awakening of the self's higher activities: contemplation, understanding, and realisation.

How Right Understanding Fosters Ethical Behavior:

1. **Internal Guidance:** Right understanding provides an intrinsic guide for the self's imagination (desire, thought, expectation). This shifts the motivation for actions from preconditioning and temporary sensations to the **natural acceptance** of relationship, harmony, and co-existence.
2. **Compassionate Character:** The clarity derived from right understanding naturally expresses itself as a **compassionate character**. This includes:
 - **Behaviour ensuring Justice and Mutual Happiness:** In human-human relationships, ethical behaviour means recognising the inherent relationship and fulfilling it with definite feelings like trust, respect, and affection, leading to mutual happiness. This is a commitment to justice, even filling gaps caused by past ignorance.
 - **Work ensuring Preservation and Mutual Prosperity:** Ethical work with the rest of nature involves ensuring the human being's prosperity while simultaneously preserving and enriching nature. This includes using cyclic and mutually enriching production processes and right utilisation, avoiding exploitation.
 - **Rightfully Acquired Wealth and Chastity:** Ethical conduct also extends to acquiring wealth through labour, gifts, or awards, and maintaining chastity in conjugal relationships, reflecting a definite and principled way of living.

How Right Understanding Fosters Social Harmony:

1. **Basis for Justice and Order:** Right understanding provides the fundamental base for establishing **justice and order** within society, leading to the formation of an **undivided human society** and a **universal human order**.

2. **Undivided Human Society:** This outcome is directly linked to behaviour rooted in the **feeling of love**. Love, as the realisation of co-existence, signifies the acceptance of being related to all human beings unconditionally. When this feeling expands from the family to the entire world family, it overcomes divisions, fosters fearlessness and trust, and transforms society from a "crowd or battlefield" into a harmonious, undivided entity.
3. **Universal Human Order:** This arises from the comprehensive participation in the larger order, guided by the understanding of harmony in nature (both human and rest of nature). It involves fulfilling the human goal through the five dimensions of human order: education-sanskar, health-sanyam, production-work, justice-preservation, and exchange-storage. This structured and harmonious participation creates a global order where human living is aligned with existential harmony.
4. **Addressing Societal Problems:** Many prevailing societal problems such as exploitation, domination, terrorism, war, resource depletion, and pollution are identified as outcomes of a **lack of right understanding** and wrong assumptions about human goals. Right understanding provides the clarity to rectify these issues and work towards a solution-oriented, peaceful, and prosperous society.

In conclusion, right understanding, by transforming the self's internal state and guiding its external conduct, naturally cultivates ethical behaviour and expands to create profound social harmony, aligning human living with the inherent order of existence.

5a. Highlight the need and the process of inner evolution towards understanding existence.

Need for Inner Evolution towards Understanding Existence: Human beings aspire for **continuous happiness**, which is the fundamental need of the self. To fulfill this, the self needs to acquire **right understanding**. The scope of this understanding is vast, encompassing the entire existence: the human being itself, the nature, and human conduct within it.

Currently, human beings often operate under **animal consciousness**, primarily focusing on the **form and property** of units and seeking happiness from external sensations or preconditions. This limited perception leads to:

- **Indefinite conduct** and fluctuations between temporary happiness and unhappiness (excitement and escape).
- The inability to see the inherent **relationship, harmony, and co-existence** in nature, leading to perceptions of opposition, disharmony, and struggle.
- Societal problems like exploitation, domination, and conflict, arising from a lack of aligning human living with the natural order.

Therefore, inner evolution is essential to shift from this limited, problem-ridden state to a state of **human consciousness**, where the self's imagination is guided by definite understanding, enabling consistent harmony and fulfilling existence.

Process of Inner Evolution towards Understanding Existence: The process of inner evolution primarily involves the **awakening of the self's higher activities: Realisation, Understanding, and Contemplation**. This awakening is fostered through **self-exploration and self-verification** based on natural acceptance.

1. **Contemplation:** This is the initial awakening to see the **natural characteristics** (participation in larger order, relationship) of units. It involves observing one's own role and the definite participation of every unit in existence, starting from immediate relationships and expanding to the whole of nature. It provides clarity about one's role and responsibility.
2. **Understanding:** As evolution progresses, the self awakens to understanding the **innateness** (self-organisation, harmony) of units. This involves perceiving the inherent harmony within each unit and in nature as a whole, leading to a determination to live in alignment with this harmony.
3. **Realisation:** This is the highest level of awakening, where the self directly perceives **co-existence** (the submergence of units in space). This realisation brings a profound feeling of bliss and certainty, eliminating all doubts and uncertainties as existence is seen as definite and orderly. It forms the ultimate foundation for all lower activities of the self.

This stepwise awakening enables the self to see the reality in its **completeness**, encompassing all five aspects (form, property, natural characteristic, innateness, co-existence), and specifically focusing on the definite, continuous, and universal aspects. The process involves shifting attention inwards, observing one's own desires, thoughts, and expectations, and evaluating their motivations. **Human education-sanskar** is crucial in facilitating this inner evolution and expediting the process of awakening to these higher activities.

5b. Elaborate on the concept of Submergence of Nature in Space.

The fundamental concept of existence, as described in the sources, is **co-existence**, which is precisely understood as **units submerged in space**. This concept forms the bedrock of understanding nature and its inherent order.

Nature of Submergence:

1. **Units:** These are the discernible entities in existence, such as atoms, plants, animals, human beings, and planets. Units are **limited in size** and are characterised by **activity**. Units can be categorised into two types:

- **Material units:** These are temporary in time and primarily respond by recognising and fulfilling. Examples include the body, soil, and metal.
 - **Consciousness units:** The self (I) is a consciousness unit, continuous in time. Its response involves knowing, assuming, recognising, and fulfilling.
2. **Space:** In contrast to units, space is **unlimited, all-pervading**, and has **no activity**. Crucially, space is **ever-present**, meaning it is unbounded in both time and space. It is not merely a void or absence, but a **fundamental reality** within which all units exist.

Characteristics of Units by Virtue of Submergence in Space: Every unit, by virtue of being submerged in space, inherently possesses definite characteristics:

- **Energised in Space:** Each unit is active and self-energised due to its presence in space.
- **Self-organised in Space:** Units exhibit definite innateness and harmony, existing in a definite order.
- **Recognises and Fulfils Relationship in Space:** Every unit identifies and fulfills its relationship with every other unit within this shared space. This leads to orderly interaction throughout nature.

Expression of Submergence in the Four Orders of Nature: The concept of submergence finds its expression in the distinct characteristics of the four orders of nature: physical, bio, animal, and human.

- **Physical Order:** Submergence manifests as **interaction**, leading to the **innateness of existence** and the **natural characteristic of composition-decomposition** (e.g., soil, metal).
- **Bio Order:** Beyond interaction, it expresses as **pulsation**, enabling the **innateness of growth** and the **natural characteristic of nurture-worsen** (e.g., plants, trees).
- **Animal Order:** In addition to body activities (interaction + pulsation), submergence manifests in the self as **sensitivity** towards sensations. The **innateness is the will to live** (often interpreted as body survival), and the **natural characteristic is cruelty/non-cruelty**.
- **Human Order:** For human beings, submergence expresses as both body activities (interaction + pulsation) and advanced capacities in the self: **sensitivity (to sensations and feelings) and knowability**. The **innateness is the will to live with continuous happiness**, and the **natural characteristics include perseverance, bravery, generosity, kindness, beneficence, and compassion**.

Seeing Submergence by the Self: The self's ability to perceive submergence depends on the awakening of its higher activities.

- At lower levels (selecting/tasting), co-existence is seen as units with a **gap or void**.
- At the analysing/comparing level, it's seen as units with an **effect of one on another**.
- Through **contemplation**, it is perceived as **relationship between units**.
- Through **understanding**, it's seen as **harmony (self-organisation)** within the unit.
- Finally, through **realisation**, the self can directly see the **co-existence, the submergence of units in space**.

Thus, the concept of submergence of nature in space illustrates a deeply interconnected and ordered existence, where every unit, from its inherent nature to its interactions, is an expression of this fundamental co-existence.

6a. Discuss the concept of "Self-awareness" in the context of understanding existence.

In the context of understanding existence, **self-awareness** refers to the self's ability to observe its own activities and potentialities directly, and to consciously direct its internal processes and external interactions. The sources emphasize that the **self (I) is the knower, the observer, and the one who understands**. Therefore, understanding the self first is crucial for understanding the entire existence.

Self-awareness as the Key to Understanding Existence:

1. **Awakening Higher Activities:** Self-awareness is fundamentally about becoming aware of and activating the **higher activities of the self (Block B1): contemplation, understanding, and realisation**. These activities enable the self to perceive the definite, continuous, and universal aspects of reality: natural characteristics (relationship), innateness (harmony), and co-existence (submergence).
2. **Internal Observation:** It involves **shifting attention inwards**, observing one's own imagination (desire, thought, and expectation) directly, without the need for the physical body. This allows the self to investigate the sources of its imagination – preconditioning, sensation, or natural acceptance – and discern what truly leads to continuous happiness.
3. **Identifying Innate Happiness:** Through self-awareness, the self can verify that **happiness is its innate nature**, not something to be acquired from external sources like favourable sensations or feelings from others, which only provide temporary excitement. This profound realisation eliminates dependence and cultivates inner self-organisation (Swatantrata).
4. **Guiding Imagination and Conduct:** As the higher activities are awakened through self-awareness, they **guide the lower activities** (imagining, analysing-comparing, selecting-tasting). This leads to definite desires, thoughts, and choices aligned with

relationship, harmony, and co-existence, resulting in **harmony within** (bliss, satisfaction, peace, happiness) and definite conduct.

5. **Perceiving Existence in Completeness:** Self-awareness allows the self to move beyond merely perceiving form and property to seeing all five aspects of a unit, thereby understanding existence in its completeness. This includes understanding space not as a void but as a reality that ensures relationship, harmony, and submergence.
6. **Enabling Transformation:** Self-awareness is the catalyst for **personal transformation** from animal consciousness to human consciousness. This internal transformation is then the foundation for **societal transformation** from an inhuman to a humane society, as individuals with self-awareness naturally express definite and mutually fulfilling behaviour, work, and participation in the larger order.

The methodology of **self-exploration** is precisely designed to cultivate this self-awareness, enabling direct observation and verification of existential realities within the self and its interactions.

6b. “Co-existence being ever-present, ever-effective and ever-expressing” – Justify the statement.

The statement “Co-existence being ever-present, ever-effective and ever-expressing” captures the fundamental and dynamic nature of existence as described in the sources. **Co-existence** is the core reality, defined as **units submerged in space**.

1. Ever-Present:

- **Presence in All Time and Space:** Co-existence is perpetual, existing **for all time and in all space**; there is no moment or place where it is absent.
- **Units in Space:** Every unit in existence, regardless of its size—from the smallest atom to the largest heavenly bodies—is inherently **energised, active, self-organised, and continuously recognises and fulfils its relationship** with other units, all within the pervasive reality of space. This consistent activity and interrelationship underscore its omnipresence.
- **Space as Foundation:** Space itself is described as **unbounded in time and space**, an ever-present reality that serves as the foundation upon which all units exist, interact, and operate in harmony.

2. Ever-Effective:

- **Universal Applicability:** The principle of co-existence is **universally effective and applies to every single reality without exception**, from sub-atomic particles to entire ecosystems and the whole of nature.

- **Manifestation in Units:** Each unit, by virtue of co-existence, possesses a **definite self-organisation (innateness)** and a **definite participation (natural characteristic)**. For example:
 - An atom is the co-existence of sub-atomic particles.
 - A molecule is the co-existence of atoms.
 - A human being is the co-existence of the self and the body.
 - A tree is the co-existence of its various parts (stem, leaf, branches, etc.).
- This inherent effectiveness ensures that all units exist in a definite order and demonstrate a predictable, definite conduct, making them identifiable and understandable.

3. Ever-Expressing:

- **Continuous Unfolding:** Co-existence is dynamic and actively **unfolds or manifests itself in diverse forms**.
- **Four Orders of Nature:** One of its primary and most significant expressions is the formation of the **four orders of nature**: the physical order, the bio-order, the animal order, and the human order. Despite the vast variety and versatility within these orders, all units are fundamentally related because they are expressions of this singular co-existence.
- **Activity, Innateness, Natural Characteristics:** The specific activities, innateness, and natural characteristics of units within each order are all direct expressions of their submergence in space and the underlying co-existence. For instance, the 'will to live with continuous happiness' as the innateness of human beings is an expression of co-existence.
- **Human Tradition:** The continuous materialisation of an **undivided human society** and **universal human order** across generations through human education and conduct is also a further unfolding and expression of this ever-present and ever-effective co-existence.

In essence, the statement emphasizes that co-existence is not a passive state but an active, universal, and continuous reality that pervades and shapes everything in existence, leading to the structured and interconnected nature we observe.

7a. Elaborate on the concept of interaction between the self and the body.

The human being is described as a **co-existence of the Self (consciousness unit) and the Body (material unit)**. While distinct, these two realities interact continuously, forming the complete human being.

Nature of Interaction: Information Only The primary and exclusive mode of interaction between the self and the body is through **information exchange**.

- **Self to Body (Instructions):** The self gives **instructions** to the body to perform various actions. For example, when the self decides to walk or eat, it sends information (instructions) to the body, and the body acts accordingly. These instructions are purely informational, not physical transfers of energy or matter.
- **Body to Self (Sensations):** The body generates **sensations** (e.g., taste, touch, sight, sound, smell, or internal states like hunger or pain), which are then **read and interpreted by the self**. These sensations are also information. For instance, when food is eaten, it is the body that processes it, but the self "tastes" the sensation generated. The self is distinct from and at a distance from sensations, meaning it is the observer, not the sensation itself.
- **No Material Transaction:** It's crucial to understand that there is **no direct physical or material transaction between the self and the body**. Material things like food become part of the body and nurture or harm it; the self does not physically "receive" them.

Self as the Decider and User of the Body as an Instrument:

- The **self is the decision-maker** regarding its interaction with the body. It decides when to give instructions to the body and when to read sensations from it. This highlights the body's role as an **instrument** that the self uses as per its decisions.
- Most of the time, the self is busy with its own internal activities and is not constantly interacting with the body. The self consciously chooses to engage with body sensations when required.

Implications of Right Understanding on Interaction: When the self gains **right understanding** (i.e., clarity of its own nature and purpose within existence), its interaction with the body transforms:

- **Feeling of Self-Regulation (Sanyam):** The self develops a **feeling of responsibility towards the body**, termed as self-regulation. This means consciously ensuring the **nurturing, protection, and right utilisation** of the body.
- **Health and Prosperity:** This self-regulation leads to the body's health and a feeling of prosperity in the self, as needs for physical facilities (food, clothes, instruments) are correctly identified as limited in quantity and used judiciously.
- **Right Utilisation of Sensation:** Sensations are no longer sought for mere temporary happiness or excitement but are **rightly utilised** for evaluating the body's state (e.g., whether food is good for health) and for communication (sharing knowledge and feelings with others).

- **Conscious Management of Bodily Impact:** The self becomes aware of how its internal states (e.g., anger, upset) affect the body and consciously works to manage these influences, ensuring harmonious interaction.
- **Body as Instrument for Holistic Goals:** The body is used as an instrument for higher purposes, such as communication, labour to obtain physical facility, and ensuring the continuity of human tradition (procreation).

In summary, the interaction between the self and the body is a sophisticated, informational exchange governed by the self. When guided by right understanding, this interaction becomes responsible, purposeful, and mutually fulfilling, supporting the overall harmony of the human being.

7b. Write a detailed note on Innateness and Natural Characteristics of Four Orders in Nature.

In the framework of Universal Human Values, the entire nature is understood as co-existence, composed of units submerged in space. These units are classified into four orders, each possessing **definite and universal** attributes of Innateness and Natural Characteristics, which are direct expressions of their submergence in space and inherent harmony.

- **Innateness (Self-organisation):** This refers to the inherent self-organisation of a unit, its intrinsic definite order, which is constant and unchangeable for a given order.
- **Natural Characteristic (Participation):** This describes the definite participation of a unit in the larger order of nature, its inherent role or responsibility.

Here is a detailed note on the Innateness and Natural Characteristics of the Four Orders:

1. Physical Order (e.g., Soil, Metal, Atoms, Molecules)

- **Innateness: Existence.** Units of the physical order exist in a definite order. They are not destroyed but transform into other forms (e.g., atoms forming molecules, or vice versa), maintaining their essential existence.
- **Natural Characteristic: Composition and Decomposition.** These units combine to form larger structures (composition) and break down into smaller ones (decomposition). This is their inherent participation in the larger natural cycles.
- **Activity:** Formation - Deformation.
- **Inheritance:** Constitution based.

2. Bio Order (e.g., Plants, Trees, Cells)

- **Innateness: Existence + Growth.** Units in the bio order inherently exist and undergo growth. A plant, if it is a plant, grows.

- **Natural Characteristic: Nurture and Worsen.** These units participate in a larger order by nurturing other units (e.g., plants providing food) or, sometimes, worsening (e.g., competition for resources).
- **Activity:** Respiration (in addition to formation-deformation).
- **Inheritance:** Seed based.

3. Animal Order (e.g., Animals, Birds) This order involves the co-existence of an animal body (material unit, similar to bio-order) and an animal self (consciousness unit).

- **Body:**
 - Innateness: Existence + Growth.
 - Natural Characteristic: Nurture and Worsen.
 - Activity: Formation - Deformation + Respiration.
- **Self (I):**
 - **Innateness: Will to live.** Every animal inherently possesses this will, which often gets interpreted as survival of the body due to complete identification of the self with the body. It includes sensitivity towards sensations (sound, touch, sight, taste, smell).
 - **Natural Characteristic: Cruelty or Non-cruelty.** This characterizes their participation in the larger order, often driven by survival instincts.
 - **Activity:** Selecting-Tasting (primarily based on sensation for body survival).
- **Inheritance:** Breed based.

4. Human Order (Human Beings) This order involves the co-existence of a human body (material unit, similar to bio-order) and a human self (consciousness unit).

- **Body:**
 - Innateness: Existence + Growth.
 - Natural Characteristic: Nurture and Worsen.
 - Activity: Formation - Deformation + Respiration.
- **Self (I):**
 - **Innateness: Will to live with Continuous Happiness.** This is the highest innate desire, and it is fulfilled by achieving right understanding, right feeling, and right thought. It also includes the **potential for contemplation, understanding, and realisation** (knowability).

- **Natural Characteristic: Perseverance, Bravery, Generosity, Kindness, Beneficence, Compassion.** These are the definitive expressions of human participation in the larger order, reflecting responsibility, courage to help others, willingness to invest oneself, and unconditional support for others' development and needs.
- **Activity:** Imaging, Analysing-Comparing, Selecting-Tasting (all can be guided by higher understanding), and sensitivity towards feelings from other human beings.
- **Inheritance:** Education and Sanskar based. Unlike other orders where inheritance is biological, human conduct is shaped by the education and values transmitted across generations.

Understanding these inherent qualities of each order is crucial for human beings to align their conduct with the natural harmony and participate effectively in the entire existence.

8a. Elucidate the realization of co-existence & its expression towards universal human order.

Realisation of Co-existence: Realisation is the highest and most profound activity of the self (I). It signifies the ability to directly perceive **existence as co-existence**, which means seeing **all units submerged in space**. This includes the profound understanding that:

- Every unit in existence is **energised in space**.
- Every unit is **self-organised in space** and exists in a definite order (harmony).
- Every unit **recognises its relationship with other units and fulfils it** in space. This realisation brings a state of **Bliss** in the self, characterised by deep certainty, freedom from doubts, and complete fulfilment, as everything is seen as definite and orderly. It also serves as the ultimate foundation for understanding (harmony) and contemplation (relationship), guiding all other activities of the self.

Expression towards Universal Human Order: The realisation of co-existence within the self is not merely an internal state; it naturally and universally expresses itself in human conduct, leading towards the establishment of a Universal Human Order. This is the **authentication** of realisation in living.

1. **Internal Harmony to External Expression:** The internal state of bliss and continuous happiness, resulting from the self's realisation, understanding, and contemplation, naturally expresses itself in definite human conduct (behaviour, work, participation).
2. **Behaviour for Undivided Human Society:**
 - Human behaviour, when guided by the realisation of co-existence, leads to **mutual happiness (justice)** in human-human relationships.

- This behaviour is founded on the **feeling of love**, which is the **acceptance of being related to all** (the complete human value). This feeling expands from the family to the entire world family.
- The consistent expression of this love and justice in behaviour culminates in an **undivided human society**, transcending divisions and fostering trust and fearlessness among all human beings.

3. **Work for Mutual Prosperity and Preservation:**

- Work with the rest of nature, guided by the understanding of co-existence, aims for **mutual prosperity**. This means ensuring human prosperity while actively **preserving and enriching nature** through cyclic and mutually enriching production processes and right utilisation.

4. **Participation for Universal Human Order:**

- Participation in the larger order (societal systems) becomes consistently harmonious, leading to the **fulfilment of the human goal** at all levels (individual, family, society, nature/existence).
- This participation, expanding from the family order to the world family order, results in the materialisation of the **Universal Human Order**. This order is established through the functioning of the five dimensions: education-sanskar, health-sanyam, production-work, justice-preservation, and exchange-storage.

5. **Human Tradition:** The continuity of this undivided human society and universal human order, passed on from generation to generation, forms a **human tradition** where the human goal is consistently fulfilled.

Thus, the realisation of co-existence within the self is the profound catalyst that initiates a cascade of definite internal states and external actions, culminating in the establishment and continuity of a harmonious, universal human order that aligns human living with the inherent order of existence.

8b. Evaluate the typical reasons for harmony and contradiction within the self.

The self, as a consciousness unit, constantly engages in desires, thoughts, and expectations, forming its imagination. The state of this imagination determines whether the self experiences harmony or contradiction.

Reasons for Harmony within the Self: Harmony within the self is primarily achieved through **Right Understanding, Right Feeling, and Right Thought** (collectively termed as **Resolution**).

1. **Awakening of Higher Activities:** The fundamental reason for harmony is the **awakening of the self's higher activities (Block B1): Realisation, Understanding, and Contemplation.**
 - **Realisation** brings clarity of co-existence.
 - **Understanding** brings clarity of harmony/self-organisation.
 - **Contemplation** brings clarity of relationship/natural characteristic.
2. **Guidance of Imagination:** When these higher activities are awakened, they **guide the lower activities of imagination (Block B2): desire, thought, and expectation.** This means the self's inner processes are no longer unguided but are aligned with existential truths.
3. **Alignment with Natural Acceptance:** This guidance ensures that the self's imagination and decisions are based on its **natural acceptance**, which inherently aligns with relationship, harmony, and co-existence, rather than external influences.
4. **Definite Conduct:** Knowing the reality (through right understanding) leads to **definite assumptions, recognition, and fulfilment**, resulting in definite and consistent conduct. This makes the self **self-organised (Swatantrata)** and free from doubts.
5. **Experience of Continuous Happiness:** The outcome of this internal harmony is a state of **continuous happiness**, experienced at various levels of the self's activities:
 - **Bliss:** From harmony between realisation and understanding (certainty about definite existence).
 - **Satisfaction:** From harmony in desire and contemplation (desires are fulfilled with provision in nature).
 - **Peace:** From harmony in analysing and comparing (thoughts are aligned).
 - **Happiness:** From harmony in selecting and tasting (expectations are fulfilled).

Reasons for Contradiction within the Self: Contradiction arises when the self's imagination and decisions are **unguided by right understanding**. This state is characteristic of **animal consciousness**.

1. **Motivation by Preconditioning and Sensation:** In the absence of right understanding, the self's desires, thoughts, and expectations are primarily driven by:
 - **Preconditioning:** Assumptions picked up from society, education, or environment without self-verification. These can be variable and often lead to wrong notions (e.g., money is everything).
 - **Sensation:** Temporary pleasure derived from the body through senses (sound, touch, sight, taste, smell).

2. **Indefinite Conduct:** When assumptions are not based on knowing, they keep changing, leading to **indefinite recognition and fulfilment**, causing inconsistency and uncertainty in human conduct.
3. **Temporary Happiness and Unhappiness:** Seeking happiness from sensations or from favourable feelings from others provides only **temporary excitement**, not continuous happiness. These sources lead to dependence, lack a completion point, and are not definite.
4. **Oscillation between Excitement and Escape:** When continuous happiness is not ensured, the self oscillates between seeking temporary excitement and **escaping from unhappiness** through activities like overeating, oversleeping, intoxication (drugs, alcohol, tobacco), or even violence and suicide.
5. **External Problems:** This internal contradiction manifests as problems in behaviour, work, and participation, leading to disharmony, opposition, and struggle at individual, family, and societal levels.

Therefore, internal harmony hinges on the self's conscious choice to cultivate right understanding, while contradiction stems from allowing imagination to be unguided by these existential truths.

9a. Explore the concept of All-encompassing Resolution and its role in understanding, wisdom, and scientific inquiry.

All-encompassing Resolution (Resolution) is defined as the **right feeling and right thought** in the self, which is essential for ensuring **continuous happiness**. It signifies a state of complete clarity and harmony within the self, covering the entire expanse of human living and interaction with existence. This resolution is articulated through nine specific aspects: Right Understanding, Wisdom, Science, Behaviour, Work, Participation in Larger Order, Undivided Human Society, Universal Human Order, and Human Tradition. The first three aspects (Right Understanding, Wisdom, Science) are purely internal to the self and are the fundamental sources of continuous happiness.

Role in Understanding: Resolution begins with **Right Understanding (Gyan)**. This means achieving **clarity of co-existence, harmony, and relationship** in the entire existence. This understanding is gained through the awakening of the self's higher activities:

- **Realisation:** Provides clarity of co-existence (units submerged in space).
- **Understanding:** Provides clarity of harmony (self-organisation and innateness of units).
- **Contemplation:** Provides clarity of relationship (natural characteristics and participation in larger order). This comprehensive understanding provides the

definite, continuous, and universal foundation upon which all other aspects of resolution and conduct are built.

Role in Wisdom: Following right understanding, resolution leads to **Wisdom**. Wisdom is the **identification of the human goal** – essentially, gaining clarity on "**what to do**" and "**what not to do**" as a human being. This goal must be in **alignment with the existential order** and inherent harmony of nature. The clarity for this human goal arises from the self's **contemplation of its participation in the larger order**. Wisdom provides the ethical and existential direction for all human endeavours.

Role in Scientific Inquiry: Resolution culminates in **Science**. Science, in this context, is the **detailing of "how to fulfil the human goal"** identified in wisdom. This detailing, which includes **plan, program, implementation, results, and evaluation**, takes place at the level of the self's imagination (thought). Science is motivated by and draws understanding from both the existential realities (co-existence, harmony, relationship) and the external situation.

This broad understanding of science encompasses three crucial components:

- **Science of Behaviour:** Focuses on how to ensure **justice and mutual happiness** in human-human relationships, leading to an undivided society.
- **Science of Work:** Focuses on how to ensure **mutual enrichment and preservation** with the rest of nature, leading to mutual prosperity.
- **Science of Participation in Larger Order:** Focuses on how to participate effectively in societal systems and dimensions (e.g., education, health, justice, production, exchange, preservation) to ensure the fulfilment of the human goal across all levels, from family to world family.

Thus, all-encompassing resolution provides a comprehensive framework, moving from a foundational understanding of existence (Right Understanding), to defining human purpose (Wisdom), and then to formulating practical means for achieving that purpose (Science). It ensures that all human inquiry and action are aligned with ultimate harmony and human well-being.

9b. Describe the impact of human conduct on achieving harmony at different levels from self to Nature and entire Existence.

Human conduct, defined as **behaviour, work, and participation in the larger order**, is the expression of the human being's inner state, particularly their level of understanding and resolution. When human conduct is based on right understanding, it leads to harmony at every level of existence, from the individual self to the entire universe.

1. Harmony within the Self (Individual Level):

- **Inner Coherence:** Right conduct stems from the self being in a state of **continuous happiness**, experienced as bliss, satisfaction, peace, and happiness. This internal

harmony is achieved when the self's imagination (desire, thought, expectation) is **guided by its higher activities** of contemplation, understanding, and realisation of co-existence, harmony, and relationship.

- **Self-Organised State:** The self becomes **self-organised (Swatantrata)**, its conduct definite and consistent, free from the contradictions and uncertainties that arise from preconditioning and sensation.

2. Harmony in Human-Human Relationships (Family to Society):

- **Mutual Happiness (Justice):** Human conduct expresses as **behaviour that leads to mutual happiness (justice)** in relationships. This is rooted in the fundamental **feeling of love** – the acceptance of being related to all human beings.
- **Undivided Human Society:** This consistent, just behaviour, expanding from the family to the world family, fosters an **undivided human society** where individuals operate with trust and fearlessness, overcoming the exploitation and domination that arise from a lack of understanding.

3. Harmony with Nature (Human-Rest of Nature Relationship):

- **Mutual Prosperity (Preservation):** Human conduct in relation to the rest of nature manifests as **work that leads to mutual prosperity (preservation)**. This ensures the prosperity of human beings while also preserving, enriching, and rightly utilising nature.
- **Eco-Friendly Processes:** This involves adopting **cyclic and mutually enriching production processes** that are eco-friendly and people-friendly, thereby addressing problems like resource depletion and pollution, which are consequences of disharmonious conduct.

4. Harmony in Entire Existence (Universal Human Order):

- **Fulfilment of Human Goal:** Human conduct includes **participation in the larger order**, which ensures the **fulfilment of the human goal** at all levels: individual, family, society, and nature.
- **Universal Human Order:** This participation, expanding from the family order to the world family order, results in the materialisation of the **Universal Human Order**. This order is underpinned by the effective functioning of all five dimensions of human order: education-sanskar, health-sanyam, production-work, justice-preservation, and exchange-storage.
- **Human Tradition:** The sustained continuity of this undivided human society and universal human order across generations leads to a **human tradition**, ensuring that the human goal is fulfilled in perpetuity.

In conclusion, human conduct, when guided by right understanding and resolution, serves as the dynamic bridge between the self's inner harmony and its manifestation in a harmonious external reality. It transforms individual well-being into collective societal and ecological balance, aligning human existence with the inherent order and co-existence of the entire universe.

10a. Discuss the components of a Holistic Way of Living as learnt from the course.

A **Holistic Way of Living** (also termed as living with **Human Consciousness**) is fundamentally aimed at ensuring the **continuity of happiness and prosperity** for every human being. It provides a comprehensive framework for human existence, transcending limited perspectives that solely focus on physical facilities or temporary pleasures. The course outlines three essential and interconnected components for achieving this holistic living:

1. Right Understanding in the Self (I):

- This is identified as the **first and most crucial priority**.
- It involves understanding the **harmony at all levels of being**: within the self, in the family, in society, and with nature and the entire existence.
- Specifically, it means perceiving reality in its completeness, including the **natural characteristics, innateness, and co-existence** of all units in the four orders of nature, and understanding existence as **units submerged in space**.
- This understanding is attained through the awakening of the self's higher activities: realisation, understanding, and contemplation.

2. Right Feeling and Right Thought in the Self (I) (Resolution):

- This component represents an internal state of **Resolution**, where the self's feelings and thoughts are consistently aligned with right understanding.
- It involves cultivating and embodying universal human values and feelings, such as **trust, respect, affection, care, guidance, reverence, glory, gratitude, and love**.
- When the self's imagination (desire, thought, expectation) is guided by these right feelings and thoughts, it leads to **internal harmony**, experienced as continuous **bliss, satisfaction, peace, and happiness**. This ensures a self-organised and definite internal state.

3. Physical Facility with the Rest of Nature (Ensuring Mutual Fulfilment):

- While physical facility alone is insufficient for continuous happiness, it is required for the body.

- A holistic way of living involves correctly **identifying the need for physical facility** (which is limited in quantity) and working for its production and utilisation in a manner that ensures **mutual prosperity** with the rest of nature.
- This implies **right utilisation** of physical facilities for nurturing, protection, and right utilisation of the body, and for broader societal development.
- It necessitates production processes that are **cyclic and mutually enriching** (eco-friendly) and ensures justice for all human beings involved (people-friendly), thereby contributing to the **preservation of nature**.

Outcomes and Enablers of Holistic Living:

- This way of living facilitates the **transformation from animal consciousness to human consciousness**, primarily enabled by **human education-sanskar**.
- It naturally expresses as **mutual happiness** in human-human relationships (justice) and **mutual prosperity** in human-nature relationships.
- Ultimately, it lays the foundation for an **undivided human society** and a **universal human order**, sustained across generations through a self-replicating **human tradition**.
- The **self is central** to this entire process, as it is the agency through which right understanding, feeling, and thought are cultivated and expressed, ensuring harmony at all levels of living.

10b. Elaborate the conduct of human within self, body, etc during ascent from lower to higher activities.

The ascent from lower to higher activities describes the **personal transformation from animal consciousness to human consciousness**, where the self's imagination shifts from being guided by preconditioning and sensation to being guided by right understanding. This journey involves changes in conduct within the self, with the body, and in the external world.

1. Conduct within the Self (Internal Transformation):

- **Initial State (Lower Activities - Imagination, Block B2):**
 - Initially, the self's **desires, thoughts, and expectations are unguided**, primarily influenced by accumulated **preconditioning** (beliefs and assumptions without verification) and **sensations** (temporary pleasures from the body).
 - Thinking is based on "appealing to senses," "conducive to health" (often leading to over-consumption), or "profit," leading to obsessions (e.g., for sensation, indulgence, profit).

- Selection and tasting are predominantly sensation-based, often overriding health or long-term well-being (e.g., eating tasty but unnecessary food).
- This unguided state leads to internal **contradictions**, temporary happiness, and oscillation between excitement and escape (e.g., overeating, intoxication).
- **Gradual Ascent (Awakening Higher Activities - Right Understanding, Block B1):**
 - **Contemplation:** As the self becomes aware, it starts to **contemplate** its natural characteristics, participation in larger order, and relationships with other units. This brings the **first element of definiteness to desires**, making them about living in relationship, harmony, and co-existence.
 - **Understanding:** Further ascent to **understanding** brings clarity about the inherent harmony and self-organisation (innateness) of every unit and nature as a whole. This understanding leads to a **natural determination** to live in harmony.
 - **Realisation:** The highest ascent involves **realisation of co-existence** (units submerged in space). This brings complete clarity, assurance, and a feeling of **bliss** within the self, making everything definite and free from uncertainty.
- **Impact on Internal Conduct:** As higher activities awaken, they **guide and organise the lower activities**. Desires become definite and aligned with natural acceptance. Thoughts are now based on co-existence, harmony, and justice. Sensations are rightly utilised for body health and sharing knowledge/feelings. This continuous internal alignment results in **continuous harmony within** the self, experienced as bliss, satisfaction, peace, and happiness.

2. Conduct with the Body:

- Initially, the body might be misused for unguided sensual pleasures.
- As the self ascends, it develops a **feeling of self-regulation (Sanyam)** towards the body. This means consciously ensuring the body's **nurturing, protection, and right utilisation**.
- The self guides the body's actions and interprets sensations from the perspective of its health and its role as an instrument for higher human goals.

3. Conduct with the Outside World (Behaviour, Work, Participation):

- **Initial State:** Without higher understanding, behaviour is sometimes happy but mostly unhappy; work is sometimes prosperous but mostly leads to deprivation; and participation is sometimes constructive but mostly passive or causes disorder.

- **With Contemplation and Understanding:** As clarity grows, behaviour becomes **mostly happy**, work mostly leads to **prosperity**, and participation mostly **contributes to order**. However, some traces of unhappiness, deprivation, or passivity may still remain due to incomplete understanding.
- **With Realisation:** When the self achieves complete realisation of co-existence, conduct becomes consistently definite and harmonious:
 - **Behaviour** consistently leads to **mutual happiness (justice)** with other human beings.
 - **Work** consistently leads to **mutual prosperity (preservation)** with the rest of nature.
 - **Participation** consistently **contributes to the universal human order** and the fulfilment of human goals.
- This culminates in the materialisation of an **undivided human society** and a **universal human order**, which is sustained across generations through a **human tradition**.

Thus, the ascent from lower to higher activities transforms the human being from a state of internal contradiction and external problems to a state of profound inner harmony and mutually fulfilling living in co-existence with the entire existence.
