

Unit 1

The "Unit 1.pdf" provides a comprehensive overview of concepts from Universal Human Values (UHV) II and introduces the deeper explorations planned for UHV III. It focuses on human aspiration, consciousness, transformation, and the central role of the 'Self' in achieving harmony.

Here is a detailed explanation of the key concepts from the unit:

1. Basic Human Aspiration and Its Fulfilment

The fundamental human aspiration is the **continuity of happiness and prosperity**. This aspiration can be fulfilled by living in **human consciousness**. Human consciousness, in essence, requires three things:

- **Right understanding** in the Self.
- **Right feeling** in relationships with other human beings.
- The **required physical facility** to ensure mutual fulfilment with the rest of nature.

If all three elements are ensured, it leads to continuous happiness and prosperity for oneself and enables one to work for the happiness and prosperity of others. While physical facility is necessary, it alone is not sufficient for human beings to achieve continuous happiness and prosperity, unlike animals for whom it might suffice for survival.

2. Transformation from Animal Consciousness to Human Consciousness

The unit highlights a crucial transformation required for human fulfilment: moving from **animal consciousness** to **human consciousness**.

- **Animal Consciousness:** This state is characterised by a primary focus on **physical facility alone**, where the imagination (desire, thought, expectation) is largely guided by **preconditioning** (ideas accumulated from society without verification) and **sensations** (information from the body). In this state, most people spend the majority of their time, and it is considered the state of modern civilisation. Living solely by physical facility is bound to fail in providing continuous happiness and prosperity for human beings and can create many problems.
- **Human Consciousness:** This is achieved when one ensures **right understanding** in the self, **right feeling** in relationships, and appropriate **physical facilities**. In this state, the higher activities of the Self guide one's imagination, leading to inner harmony and happiness.

The transformation from animal consciousness to human consciousness is ensured through **human education-sanskar**. This process aims to enable every human being to fulfil their aspirations.

3. Living with Human Consciousness and its Outcomes

Living with human consciousness provides the foundation for:

- Ensuring **justice** in relationships with human beings, expanding from the family to the world family.
- Ensuring **order** and participation in the larger order with nature as a whole.

The outcomes of this transformation are significant at both individual and societal levels:

- **At the individual level:** Mutual happiness and mutual prosperity.
- **At the societal level:** An undivided human society and universal human order.

This transformation starts with **personal transformation** (in individual consciousness) and then extends to the family and ultimately the world family.

4. Expected Transformations: Personal and Societal

The document identifies two desirable transformations:

- **1. Personal Transformation (Transformation in Consciousness):**
 - This is the **basic and starting point** for change. It occurs at the level of the Self and calls for **right understanding, right feeling, and right thought** in the Self.
 - It involves becoming aware of and activating the **higher activities of the Self (Block B1)**. These activities are:
 - **Contemplation:** Developing clarity about one's participation and responsibility in relationships within the larger order.
 - **Understanding:** Gaining clarity about harmony in nature, in each unit, and in the whole existence.
 - **Realisation:** Achieving clarity about co-existence (seeing units submerged in space and their interrelationships).
 - When these higher activities (B1) are active and clear, they **guide the imagination (Block B2)**, which consists of desire, thought, and expectation. This guidance ensures inner harmony and happiness.
 - UHV III focuses heavily on working on these higher activities to achieve clarity about relationship, harmony, and co-existence.
- **2. Societal Transformation:**

- This is the movement from an **inhuman society** to a **human society**.
- **Human Society Goals (Four Human Goals):**
 1. **Happiness** in every individual (from right understanding and feeling).
 2. **Prosperity** in every family.
 3. **Fearlessness (Trust)** in society.
 4. **Co-existence and mutual fulfilment** in nature and existence.
- **Present Inhuman Society (Problems):** Currently, society often resembles a "crowd or battlefield" due to:
 - Assumptions like "money is everything" instead of right understanding.
 - Accumulation by any means instead of prosperity (only for a few).
 - Domination, exploitation, and fear instead of fearlessness and trust.
 - Mastery and exploitation of nature instead of co-existence.
 - Obsession for consumption, profit, and sensual pleasure, leading to terrorism, war, resource depletion, and pollution.
- **Interconnection:** Human beings create society, and society shapes human beings. Human consciousness leads to human society, and human society cultivates individuals with human consciousness.
- **Priority:** Personal transformation (through human education-sanskar) is the starting point, leading to societal transformation as individuals with human consciousness behave and work in a mutually fulfilling manner.

5. Self is Central to Human Existence

A fundamental conclusion from the course is that **the Self is central to human existence**. Ensuring **right understanding, right feeling, and right thought in the Self** is the core program for human beings, as it ensures harmony in the entire expanse of human living and conduct.

6. Human Being as Co-existence of Self and Body

The human being is understood as the **co-existence of two distinct entities: the Self (consciousness unit) and the Body (material unit)**. These two have different needs, activities, and responses.

- **Self (Consciousness Unit):**

- **Needs:** Are **continuous** in time, **qualitative** in nature (e.g., happiness, respect), and fulfilled by **right understanding and right feeling**.
- **Activities:** Desire, thought, expectation (continuous in time).
- **Response:** Involves **knowing, assuming, recognising, and fulfilling**. The 'knowing' and 'assuming' aspects are crucial and differentiate human response from the body's.
- **Body (Material Unit):**
 - **Needs:** Are **temporary** in time, **quantitative** in nature (e.g., food, clothes), and fulfilled by **physio-chemical things**.
 - **Activities:** Eating, walking, etc. (temporary, body gets tired).
 - **Response:** Is **definite** and involves only **recognising and fulfilling**.

It is important to understand that the needs of the Self cannot be fulfilled by physical facility, nor can the needs of the Body be fulfilled by feelings or understanding alone. Both need to be addressed appropriately.

7. Knowing and Assuming in the Self

The Self's response involves knowing, assuming, recognising, and fulfilling. This distinction is vital for understanding human conduct:

- **Knowing:** This refers to seeing the **reality as it is, in its completeness, through direct observation** by the Self. Knowing is **definite, has continuity, and universality**.
- **Assuming:** This is **what one accepts about a reality**. Assumptions can be based on knowing or can exist **without knowing** (i.e., one has not seen the reality completely).
- **Recognising:** Based on an assumption, one **identifies a relationship** with that reality (human or nature).
- **Fulfilling:** One then **participates with that reality** according to the recognised relationship.

The Problem: When one operates primarily with assuming, recognising, and fulfilling **without knowing**, there is a high likelihood of problems. Assumptions can be wrong or change over time, leading to **indefinite conduct**. **The Solution:** When knowing is established, assumptions are based on this definite knowing, leading to **definite recognition and fulfilment**, and thus **definite (self-organised) conduct**. The major role of education-sanskar is to transition individuals from assuming without knowing to assuming with knowing.

8. Existence as Co-existence

The unit explains existence as **co-existence**, meaning **units submerged in space**. This co-existence is ever-present in all time and places.

- **Space:** It is **unlimited, all-pervading, and has no activity**.
- **Units:** They are **limited in size and are active**. Units are categorised into two types:
 - **Material Units:** These include the **Physical Order** (atoms, molecules, molecular structures, lumps, fluids) and the **Bio Order** (cells, plants, animal bodies, human bodies). Material units are temporary and only recognise and fulfil.
 - **Consciousness Units:** This refers to the **Self**. Consciousness units are continuous and involve knowing, assuming, recognising, and fulfilling.

The document highlights that everything in nature, up to the animal order, operates with definite conduct and is already in harmony. The **human order** is where uncertainty in conduct arises due to the lack of right understanding in the Self. The role of human beings is to develop this right understanding (of relationship, harmony, and co-existence) and align their feelings and thoughts to live in a mutually fulfilling manner with the world.

9. Human Conduct

Human conduct is described as the **realisation of co-existence and its expression**. It starts with the realisation within the Self and culminates in the expression outside at the societal and global levels, leading to a universal human order. The basis of this conduct lies in the activities of the Self, specifically in blocks B1 (higher activities) and B2 (imagination).

10. Self-exploration as the Methodology

Self-exploration is presented as a fundamental methodology for understanding and transformation. It involves a two-way verification process when presented with a proposal:

1. **Verification on the basis of Natural Acceptance (Block B1):** One questions whether the proposal is naturally acceptable to them, appealing to the higher activities of the Self. The natural acceptance for human beings is for feelings of relationship, harmony, and co-existence, not opposition, contradiction, or struggle.
2. **Experiential Verification by Living Accordingly (Behaviour and Work):** One tests the proposal in their daily life.
 - Does their **behaviour** with human beings lead to **mutual happiness**?
 - Does their **work** with the rest of nature lead to **mutual prosperity**?

If a proposal is found to be naturally acceptable and leads to mutual happiness and prosperity through experience, it is considered a right proposal. The goal is to move from accepting a proposal merely at the thought level to achieving a deeper acceptance at the level of realisation, which then guides one's imagination and actions. This methodology is crucial for the deeper investigations in UHV III.

Unit 2

Right Understanding is a fundamental concept aimed at ensuring the continuity of happiness for human beings. It provides the foundation for all other human activities, including relationships with other human beings and interactions with the rest of nature.

Here is a detailed explanation of Right Understanding based on the provided sources:

1. What is Right Understanding?

Right understanding essentially means seeing reality as it is, in its completeness. It is crucial for achieving continuous happiness, alongside right feeling and right thought, which together are called "resolution". If one has resolution within, they are in a state of harmony; otherwise, they are in a state of confusion or contradiction.

2. The Nine Aspects of Resolution

Right understanding is part of a broader concept of "resolution," which involves clarity on nine aspects related to human existence:

1. **Human Desire:** Equals continuous happiness.
2. **Continuous Happiness:** Achieved through Right Understanding, Right Feeling & Right Thought (Resolution).
3. **Resolution:** Comprises:
 - **Right Understanding.**
 - **Wisdom** (Identification of Human Goal).
 - **Science** (How to fulfil Human Goal).
 - **Behaviour.**
 - **Work.**
 - **Participation in Larger Order.**
 - **Undivided Human Society.**
 - **Universal Human Order.**
 - **Human Tradition** (in which Human Goal is fulfilled).

The first three aspects (Right Understanding, Wisdom, Science) primarily occur at the level of the Self. These are then expressed through the body as behaviour, work, and participation in the larger order with the outside world, leading to an undivided human society, a universal human order, and a human tradition.

3. The Five Aspects of a Unit in Reality

To see reality in its completeness, one must understand five aspects of any 'unit':

1. **Form:** Refers to the shape, size, and density of a unit.
2. **Property:** Describes the effect of one unit on another. This can be observed through sensation, involving both the body and the Self, or through rational thought (analysing/comparing), involving the Self only.
3. **Natural Characteristic:** This is a unit's participation in a larger order or its responsibility in a relationship. For humans, this includes feelings like trust, respect, care, and virtues like perseverance, bravery, generosity, kindness, beneficence, and compassion.
4. **Innateness:** This refers to a unit's self-organisation. For humans, innateness is the **will to live with continuous happiness**.
5. **Co-existence:** This signifies a unit's submergence in space.

The sources highlight that contemporary science primarily focuses on form and property, which is insufficient for understanding the full reality of a unit, especially human beings. Understanding the natural characteristic, innateness, and co-existence is crucial, as these aspects are **definite, continuous, and universal**, unlike form and property which are variable and changing.

To achieve right understanding, one needs to specifically understand these three aspects for all four orders of nature: physical, bio, animal, and human:

- **Natural characteristics of the four orders** (4 aspects).
- **Innateness of the four orders** (4 aspects).
- **Co-existence of nature in space** (1 aspect).

4. The Knower, the Known, and the Process of Knowing

a. The Knower

The **Self (I)** is the knower. It is the seer, doer, and experiencer, and it uses the body as an instrument. The Self has the potential to pay attention and observe reality in its completeness, though its current ability to "see" (comprehend) depends on its developed competence. The Self can operate at different levels of seeing, from basic sensations to higher activities.

b. What is to be Known (Content of Knowing)

Ultimately, what is to be known is the **entire existence**. This includes:

1. **Knowledge of Human Being:** Understanding the Self and the human being in detail.

2. **Knowledge of Existence:** Understanding the harmony in Self, family, society, nature, and existence.
3. **Knowledge of Human Conduct:** Understanding the role of human beings in existence.

c. The Process of Knowing

The process of knowing involves **awakening to the higher activities of the Self**: Realisation, Understanding, and Contemplation. When these activities are awakened, the Self develops the competence to see the co-existence, innateness, and participation of any unit in its completeness.

5. Details of Realisation, Understanding, and Contemplation

- **Realisation:** This is the activity to see **co-existence**. It means seeing that existence is fundamentally co-existence, with **all units submerged in space**.
 - Every unit is energised in space.
 - Every unit is self-organised in space and exists in a definite order.
 - Every unit recognises and fulfils its relationship with every other unit in space.
 - For the Self, realisation means seeing itself as a unit of consciousness in space, energised, self-organised, and capable of recognising and fulfilling relationships, leading to continuous happiness.
 - When one realises co-existence, they live with **authenticity** and gain a feeling of **bliss** because there is no doubt or uncertainty about the definite conduct and self-organisation of every unit. Realisation activates "authentication" as a dynamic activity in the Self.
- **Understanding:** This is the activity to see **harmony (self-organisation/innateness)**. It involves understanding that all units in nature can be classified into four orders, and these units and orders possess a **definite innateness or self-organisation**.
 - For human beings, understanding reveals the innateness of the **will to live with continuous happiness**.
 - This definiteness, stemming from understanding, leads to a feeling of **bliss** (no doubt, no fear, no uncertainty).
 - When one understands their own self-organisation, they are **determined** to live in accordance with it and also facilitate the self-organisation of other units. Understanding activates "determination" as a dynamic activity in the Self.

- **Contemplation:** This is the activity to see **one's participation in a larger order or in relationships**. It means seeing the definite role a unit plays in existence and its relationships with other units.
 - For human beings, contemplation allows one to clearly see feelings like trust, respect, affection, and ultimately, love, enabling participation in human-human relationships for **mutual happiness** and in an **undivided human society**.
 - It also involves seeing one's participation with the rest of nature, leading to **mutual prosperity** and participation in a **universal human order**.
 - Contemplation leads to definite desires and the recognition that there is provision in nature for fulfilling these desires, resulting in a feeling of **satisfaction/contentment**.

6. Impact of Right Understanding

a. On the Self

When the activities of realisation, understanding, and contemplation are awakened, right understanding is achieved in completeness. This has a profound impact on the Self:

- **Guides Imagination:** The right understanding intrinsically guides the Self's imagination, ensuring that desires, thoughts, and expectations are no longer unguided by sensations or preconditioning, but rather by the higher activities.
- **Continuous Happiness:** This leads to a state of **continuous happiness within the Self**. Specifically:
 - **Bliss** at the level of understanding (from realisation of co-existence and the definite self-organisation of every unit).
 - **Satisfaction/Contentment** at the level of desire (from contemplation of one's definite role and the provision for its fulfilment).
 - **Peace** at the level of thought (from thoughts aligned with co-existence, harmony, and relationship).
 - **Happiness** at the level of expectation (from selections and tastings guided by co-existence, harmony, and relationship, leading to fulfilled expectations).
- **Self-organisation of Activities:** The higher-level activities (contemplation, understanding, realisation) activate and self-organise the lower-level activities of the Self (imaging, analysing, comparing, selecting, tasting).
- **Guidance by Natural Acceptance:** The lower activities in the Self become fully guided by one's natural acceptance for relationship, harmony, and co-existence.

b. On Human Conduct

The state of definite imagination, guided by right understanding, expresses itself externally through definite behaviour, work, and participation in the larger order.

- **Behaviour:** Leads to **mutual happiness** in interactions with other human beings, guided by the understanding of relationship, harmony, and co-existence. This forms the basis for an **undivided human society** where one feels related to all human beings.
- **Work:** Leads to **mutual prosperity** when interacting with the rest of nature, ensuring the well-being of both the human being and nature.
- **Participation in Larger Order:** Ensures the **fulfilment of a human goal** and leads to the materialisation of a **Universal Human Order**, starting from the family and expanding to the whole world family.
- **Human Tradition:** This definite conduct, based on right understanding, right feeling, and right thought, is then sustained and passed on to the next generation through education and sanskar, forming a **human tradition** that ensures continuous happiness across generations.

7. Human Participation in the Entire Nature

With right understanding, human participation aims to understand the inherent harmony in nature and live accordingly. This involves facilitating (or at least not violating) the activity, innateness, and inheritance of all orders.

- **Physical Order:** Facilitate its existence, ensuring a conducive environment and maintaining its constitution (e.g., Earth's constitution).
- **Bio Order:** Facilitate its growth, ensuring a conducive environment and maintaining its seeds (e.g., rice seeds).
- **Animal Order:** Facilitate care for its body, ensuring physical facility and environment for existence and growth, and maintaining its breed.
- **Human Order:** Facilitate care for the body by ensuring physical facility, and facilitate the Self's will to live with continuous happiness by ensuring human education-sanskar, and participating in developing/maintaining an undivided society and universal human order.

This participation also involves **preservation** of the units in other orders through **enrichment, protection, and right utilisation**, which ensures the fulfilment of human physical needs and a feeling of prosperity.

Unit 3

Right Understanding is a cornerstone concept that provides the **foundation for continuous happiness** and governs all human activities, including relationships and interactions with nature. It involves **seeing reality as it is, in its completeness**.

Here is a detailed explanation of Right Understanding:

1. The Core Meaning of Right Understanding

Right Understanding, also referred to as 'knowing', means to **perceive reality in its entirety**. It is essential for achieving "resolution" within the self, leading to harmony, rather than confusion or contradiction.

To comprehensively understand reality, one must observe **five key aspects of any 'unit'**:

1. **Form**: Refers to characteristics like shape, size, and density.
2. **Property**: Describes the effect one unit has on another.
3. **Natural Characteristic**: Represents a unit's participation in a larger order or its responsibility in a relationship. For humans, this includes feelings like trust, respect, care, and virtues such as perseverance, bravery, generosity, kindness, beneficence, and compassion.
4. **Innateness**: Pertains to a unit's inherent self-organisation. For human beings, the innateness is the **will to live with continuous happiness**.
5. **Co-existence**: Signifies a unit's submergence in space.

The sources highlight that **contemporary science primarily focuses on form and property**, which are described as variable and changing, and thus insufficient for a complete understanding of a unit, especially human beings. In contrast, the **natural characteristic, innateness, and co-existence are definite, continuous, and universal**. Understanding these three aspects for all four orders of nature is crucial for Right Understanding.

2. Resolution: The Nine Aspects

Right Understanding is part of a comprehensive framework called "Resolution", which provides clarity on nine aspects related to human existence:

1. **Human Desire**: The fundamental desire of a human being is **continuous happiness**.
2. **Continuous Happiness**: Achieved through **Right Understanding, Right Feeling & Right Thought** (collectively termed "Resolution" internally).
3. **Clarity of Resolution**: This involves understanding:

- **Right Understanding.**
- **Wisdom** (Identification of Human Goal).
- **Science** (How to fulfil Human Goal).
- **Behaviour.**
- **Work.**
- **Participation in Larger Order.**
- **Undivided Human Society.**
- **Universal Human Order.**
- **Human Tradition** (in which Human Goal is fulfilled).

The first three (Right Understanding, Wisdom, Science) primarily occur at the level of the Self and are expressed through the body as behaviour, work, and participation in the larger order. This leads to the manifestation of an undivided human society, a universal human order, and a human tradition.

3. The Knower, What is to be Known, and the Process of Knowing

a. The Knower: The Self (I)

The **Self (I) is the knower**. It is the seer, doer, and experiencer, utilising the body as an instrument. The Self has the **potential to perceive reality in its completeness**, across all five aspects of a unit, though its current ability to "see" depends on its developed competence. The Self's "seeing" can range from basic sensation (tasting/selecting) to higher activities like comparing/analysing, contemplating/imaging, understanding/determination, and realisation/authentication.

b. What is to be Known: The Entire Existence

Ultimately, what needs to be known is the **entire existence**. This knowledge is structured into three main areas:

1. **Knowledge of Human Being:** Understanding the Self and the human being in detail.
2. **Knowledge of Existence:** Understanding the harmony in Self, family, society, nature, and existence itself. This involves seeing existence as co-existence, with units submerged in space.
3. **Knowledge of Human Conduct:** Understanding the role of human beings in existence.

c. The Process of Knowing: Awakening Higher Activities of the Self

The process of knowing involves **awakening to the higher activities of the Self**: Realisation, Understanding, and Contemplation. When these activities are awakened, the Self develops the competence to see the co-existence, innateness, and natural characteristic of any unit in its completeness.

- **Realisation**: The activity to **see Co-existence**. It means seeing that existence is fundamentally **co-existence**, where **all units are submerged in space**. Key aspects of realisation include seeing that every unit in nature is energised, self-organised, and recognises/fulfils its relationship in space. For the Self, this means seeing itself as a unit of consciousness in space, energised, self-organised, and capable of recognising and fulfilling relationships, leading to continuous happiness. Realisation leads to living with **authenticity** and a feeling of **bliss**, as doubts and uncertainty vanish when the definite conduct and self-organisation of every unit are perceived. Realisation activates "authentication" as a dynamic activity in the Self.
- **Understanding**: The activity to **see Harmony (Self-organisation/Innateness)**. It involves comprehending that all units in nature can be classified into four orders, and these units and orders possess a **definite innateness or self-organisation**. For human beings, understanding reveals the innateness of the **will to live with continuous happiness**. This definiteness, stemming from understanding, leads to a feeling of **bliss** (no doubt, no fear, no uncertainty). When one understands their own self-organisation, they are **determined** to live in accordance with it and facilitate the self-organisation of other units. Understanding activates "determination" as a dynamic activity in the Self.
- **Contemplation**: The activity to **see one's participation in a larger order or in relationships**. It means seeing the definite role a unit plays in existence and its relationships with other units. For human beings, contemplation allows one to clearly see feelings like **trust, respect, affection, and ultimately, love**, enabling participation in human-human relationships for **mutual happiness** and in an **undivided human society**. It also involves seeing one's participation with the rest of nature, leading to **mutual prosperity** and participation in a **universal human order**. Contemplation leads to definite desires and the recognition that nature provides for fulfilling these desires, resulting in a feeling of **satisfaction/contentment**.

4. State of the Self with and without Knowing

Without awakening to the higher activities, the Self's imagination is often **unguided by sensations and preconditioning**, leading to unguided desires, thoughts, and expectations. This state can lead to confusion and contradiction.

With **right understanding**, the higher-level activities (contemplation, understanding, realisation) activate and **self-organise the lower-level activities** of the Self (imaging, analysing, comparing, selecting, tasting). The imagination becomes **guided** by

contemplation, understanding, and realisation, aligning desires, thoughts, and expectations with relationship, harmony, and co-existence. This guidance by **natural acceptance** ensures a state of **continuous happiness within the Self**:

- **Bliss** at the level of understanding (from realisation of co-existence and definite self-organisation).
- **Satisfaction/Contentment** at the level of desire (from contemplation of definite roles and provision for fulfilment).
- **Peace** at the level of thought (from thoughts aligned with co-existence, harmony, and relationship).
- **Happiness** at the level of expectation (from selections and tastings guided by co-existence, harmony, and relationship, leading to fulfilled expectations).

5. Impact of Right Understanding on Human Conduct

The definite imagination, guided by right understanding, expresses itself externally through definite behaviour, work, and participation in the larger order:

- **Behaviour**: Leads to **mutual happiness** in interactions with other human beings, based on the understanding of relationship, harmony, and co-existence. This forms the basis for an **undivided human society** where one feels related to all human beings.
- **Work**: Leads to **mutual prosperity** when interacting with the rest of nature, ensuring the well-being of both the human being and nature.
- **Participation in Larger Order**: Ensures the **fulfilment of a human goal** and leads to the materialisation of a **Universal Human Order**, starting from the family and expanding to the whole world family.
- **Human Tradition**: This definite conduct, based on right understanding, right feeling, and right thought, is sustained and passed on through **human education and sanskar**, ensuring continuous happiness across generations.

6. Co-existence in Detail

a. Existence = Co-existence = Units Submerged in Space

Existence is fundamentally **co-existence**, comprising **units submerged in space**.

- **Ever Present**: Co-existence is present for all time and space, without exception. Every unit is energised, active, self-organised, and recognises/fulfils its relationship in space.

- **Ever Effective:** The principle of co-existence applies to every reality, from sub-atomic particles to human beings. Examples include atoms forming molecules, and human beings being a co-existence of self and body.
- **Ever Expressing:** Co-existence constantly unfolds and expresses itself in diverse ways, leading to the apparent variety and relationships observed in nature.

b. Units and Space

Existence consists of two distinct types of reality: **units and space**.

- **Units:** Are **limited in size** and are **active**. They are further categorised into:
 - **Material Units:** Are **temporary** in time. Their response is definite, based on **recognising and fulfilling**.
 - **Consciousness Units (Self):** Are **continuous** in time but limited in size. Their response involves **knowing, assuming, recognising, and fulfilling**, meaning their recognition and fulfilment can vary based on assumption or knowledge.
- **Space:** Is **unlimited** (all-pervading) and **unbounded in time and space**. It has **no activity** itself. Space provides the foundation for units to be energised, self-organised, and to recognise and fulfil relationships.

c. Co-existence Expressing Itself as Four Orders of Nature

The ever-expressing co-existence manifests in **four orders of nature**: Physical, Bio, Animal, and Human. Each order has distinct characteristics:

- **Physical Order (e.g., soil, metal):**
 - **Activity:** Formation-Deformation.
 - **Innateness: Existence** (it exists in a definite order and is not destroyed, only transformed).
 - **Natural Characteristic:** Composition-Decomposition.
 - **Inheritance:** Constitution-based.
- **Bio Order (e.g., plants, trees):**
 - **Activity:** Formation-Deformation + Respiration.
 - **Innateness:** Existence + **Growth**.
 - **Natural Characteristic:** Composition-Decomposition + **Nurture-Worsen**.
 - **Inheritance:** Seed-based.
- **Animal Order (e.g., animals, birds):**

- **Body Activities/Innateness/NC/Inheritance:** Same as Bio Order (Formation-Deformation + Respiration, Existence + Growth, Nurture-Worsen, Breed-based).
- **Self Activities: Selecting-Tasting** (based on sensitivity to sound, touch, sight, taste, smell).
- **Self Innateness: Will to live** (interpreting living as body survival, entirely identified with the body).
- **Self Natural Characteristic: Cruelty or Non-cruelty.**
- **Human Order (Human Beings):**
 - **Body Activities/Innateness/NC/Inheritance:** Same as Bio Order.
 - **Self Activities: Imaging, Analysing-Comparing, Selecting-Tasting,** and critically, the **potential for Contemplation, Understanding & Realisation.**
 - **Self Innateness: Will to live with continuous happiness.** This requires right understanding, right feeling, and right thought.
 - **Self Natural Characteristic: Perseverance, Bravery, Generosity, Kindness, Beneficence, Compassion** (requires understanding of self and existence).
 - **Inheritance: Education & Sanskar-based,** ensuring the definite conduct of future generations. This means humans have a **choice** and can expedite their development consciously through education.

7. How Co-existence and its Expression are Seen by the Self

The Self perceives co-existence and its expressions differently depending on the level of activity it is engaged in:

- **Selecting/Tasting:** Sees co-existence as **two units with a gap (void)** in between, focusing on basic form.
- **Analysing/Comparing:** Sees co-existence as **two units with an effect of one unit on another**, viewing space as a medium for transfer of effect.
- **Contemplation:** Sees **relationship between units**, understanding space as a reality where relationship is ensured.
- **Understanding:** Sees **harmony (self-organisation) in the unit**, viewing space as a reality where harmony is ensured.
- **Realisation:** Sees the **co-existence – submergence of units in space**, understanding space as the ultimate reality ensuring submergence.

Current knowledge systems predominantly focus on seeing through sensation and rationality (analysing/comparing), neglecting the existential essence (natural characteristic, innateness, co-existence). This limited perception is identified as the **source of widespread problems** like opposition, disharmony, contradiction, struggle, terrorism, and wars in the world today. By awakening to higher activities, humans can resolve these issues and align their conduct with the inherent relationship, harmony, and co-existence in existence.

8. Role of Human Being in Co-existence

Based on these insights, the fundamental **role of a human being in existence** is:

1. **To understand co-existence** (which encompasses knowledge and resolution based on co-existence, harmony, and relationship).
2. **To live in co-existence** (which involves living in relationship with human beings, leading to an Undivided Society, and living in harmony with the rest of nature, leading to a Universal Human Order).

This fulfilment of the human role ultimately leads to **continuous happiness in the Self**.

Unit 4

Based on the "unit 4.pdf" excerpts, here is a detailed explanation of its key concepts:

Understanding the Human Being

The document delves into understanding the **human being as a co-existence of the self and the body**.

- The **self is a conscious unit**, while the **body is a material unit**. These two distinct realities co-exist to form a human being.
- The primary goal is to **achieve continuous happiness**, which is the basic aspiration of a human being.

Distinct Needs, Activities, and Responses of Self and Body

The document highlights significant differences between the self and the body:

- **Needs:**
 - The **need of the self is happiness**, and this need is **continuous** and **qualitative** (a feeling). It is fulfilled by **right understanding and right feeling**.
 - The **need of the body is physical facility**, which is needed **temporarily** and is **quantitative** (required in limited quantity). It is fulfilled by **physio-chemical things**. Examples include food for nurturing, clothes for protection, and instruments for participation.
- **Activities:**
 - The self has **continuous activities** such as **desire, thought, and expectation**, along with knowing, assuming, recognising, and fulfilling.
 - The body has **temporary activities** like eating, walking, and sleeping, which primarily involve recognising and fulfilling.
- **Responses:**
 - The **body's response** is limited to **recognising and fulfilling**.
 - The **self's response** involves **knowing, assuming, recognising, and fulfilling**.
 - **Assuming is always involved in the self's response**, but it is not seen in the body.
 - When the self operates only on assuming, recognising, and fulfilling, its **conduct is indefinite** because assumptions can change.

- However, when **knowing is ensured (through education-sanskar), assuming is guided by knowing, leading to definite conduct**. Operating without knowing is considered a domain of problem, leading to preconditioning and indefinite conduct.

Direct Observation and Self-Exploration

The document stresses the importance of **direct observation** to understand the self and body.

- **Exercises 1 and 2** are designed to help in this process.
- These exercises aim to develop **right understanding** and **purification of accumulated feelings and thoughts**. The ultimate target is **living with continuous fulfilment**.
- To ensure continuous happiness, three things need to be developed:
 1. **Right understanding in the self**: This means understanding the existential reality, including the self, body, family, society, nature, and the entire existence.
 2. **Right feeling and right thought in the self**: This involves feelings of relationship, harmony, and co-existence, and thoughts based on these feelings.
 3. **Competence for right living with the world outside**: This is expressed through behaviour, work, and participation in the larger order, guided by feelings of relationship, harmony, and co-existence.

The **major focus of these exercises is on working on the self**. Once the self is understood, living in harmony internally and externally becomes possible.

The Process of Observation

To understand reality and live meaningfully, one needs to **pay attention, be mindful, and aware**.

- The **object of attention is whatever is to be lived with** (self, body, family, society, nature, and the entire existence).
- The process of paying attention involves **making a decision to be aware of a particular reality**.
- Crucially, one must **evaluate reality without any reaction**, as reactions can distort observation.

The Seer and the Levels of Seeing

The **self is the seer or observer**, and the body is used as an instrument by the self.

- Observation occurs at three levels:
 1. **Seeing the self by the self:** Consciousness observing consciousness, where the self is both the seer and the object of attention. Exercise 1 focuses on this.
 2. **Seeing the body by the self:** Consciousness observing material, where the self is the seer and the body is the object of attention. Exercise 2 starts with this.
 3. **Seeing the co-existence by the self:** Consciousness observing co-existence, which includes observing the distance and relationship between the self and the body. Exercise 3 briefly discusses this.

Focus: From Outside to Inside

Traditionally, human attention is often outward, engaged with the external world and relationships based on assumptions. This can lead to confusion when problems arise.

- The advocated approach is to **first focus inside, within the self, to ensure knowing and assuming**. With this inner clarity, one can then participate effectively outside.
- **Observing imagination (desire, thought, expectation) does not require physical eyes or the body**; it can be done directly by the self. This allows the body to be at rest while the self works.

Interaction between the Self and the Body

The interaction between the self and the body occurs **in the form of information only**.

- There is **no physical transaction** between them.
- The **self gives instructions to the body** (e.g., "go to the sweet shop").
- The **body provides sensations to the self** (e.g., taste of a sweet, feeling cold). The self "reads" these sensations as information.
- The **self is the one deciding, observing, and experiencing happiness or unhappiness**. The self is not sensation itself but is at a distance from sensations, able to read them.
- The **self interacts with the body as and when required**, using it as an instrument based on its decisions. Most of the time, the self is busy with its own activities and not paying attention to the body.

Self-Regulation and Prosperity

Understanding the body as an instrument of the self leads to **self-regulation**, which is the **feeling of responsibility towards the body** for its nurturing, protection, and right utilisation.

- With self-regulation, the **needs for physical facility can be quantified** (e.g., specific amounts of food, clothing, shelter, instruments).
- This understanding also leads to the **feeling of prosperity**: having or producing **more than the required physical facility**. This feeling requires both the **identification of required physical facility through right understanding** and **right skills to acquire it**.
- A prosperous person thinks about **right utilisation and nurturing others**.
- Without prosperity, people can be unhappy and deprived, whether they lack physical facility or possess it. The goal is to be **happy and prosperous with physical facility**.

Misunderstanding and its Consequences

A **gross misunderstanding** is assuming the self to be the body and believing happiness (like respect) can be obtained through physical facility or sensation.

- This leads to the belief that the **need for physical facility is unlimited**, resulting in a tendency to **accumulate more and more**, trapping one in a vicious cycle of accumulation and feeling deprived.

Higher Activities of the Self

The document investigates the higher activities of the self, differentiating them into two blocks:

- **Block B1 (Right Understanding)**: Realisation, Understanding, Contemplation.
- **Block B2 (Imagination)**: Desire, Thought, Expectation, Comparing, Analysing, Tasting, Selecting.

Most people are typically busy with the lower activities of B2, often unaware of the higher activities and living in "animal consciousness". However, there is a natural desire to evolve.

Awakening to Higher Activities

To evolve, one must **awaken to the higher activities of contemplation, understanding, and realisation**. Right understanding is about seeing the essence of reality as definite, universal, and continuous.

- **Contemplation**: This involves having a **clarity of relationship, natural characteristic, and participation in the larger order**. For example, seeing feelings like trust and respect as natural in human relationships.
- **Understanding**: This entails clarity of **harmony in nature, self-organisation, and the innateness of every unit**.

- **Realisation:** This is having **clarity of co-existence in existence and the submergence of units in space**. It means seeing that the self is in co-existence in space, energised and self-organised in space.

These higher activities, once awakened, **guide the lower activities of the self**. This results in desires, thoughts, and expectations becoming definite and aligned with co-existence, harmony, and justice.

Impact of Higher Activities on Lower Activities

Impact on Analysing and Comparing (Thought)

Without the guidance of higher activities, thought (analysing and comparing) is often based on:

- **Sensation:** What is appealing to the senses (e.g., taste of food).
- **Health:** What is conducive to health.
- **Profit:** What leads to profit from acquiring physical facility. This can lead to obsessions for sensation, consumption/indulgence, or profit, causing many societal problems.
- **Sensation is a source of temporary happiness (excitement) only, not continuous happiness.** Animals' sensations are naturally restrained for health, but humans can harm themselves chasing sensations without right understanding.

With the guidance of higher activities, the basis for analysing and comparing shifts to **co-existence, harmony, and justice**.

- The role of sensation becomes: **keeping the body in good health** (nurturing, protection) and **exchanging right understanding and right feeling** (education-sanskar).
- The right utilisation of the body as an instrument includes: **communication, labour for physical facility, and continuity of human tradition**.
- Physical facility is rightly utilised for: **nurturing/protection of the body** and **exchanging right understanding/feeling**.
- "Profit" transforms into **clarity about prosperity** (identifying needs, having more than required), indicating fulfilment of relationship with nature.

Impact on Selecting and Tasting (Desire/Expectation)

Without right understanding, selection and tasting are mostly based on **sensation**. This leads to seeking temporary happiness (excitement) from external sources, like tasty food even when unhealthy, or feelings from others. Such sources cannot ensure continuous happiness.

With right understanding, there are three bases for selecting and tasting:

1. **Goal-based:** Based on the human goal, leading to **realisation of co-existence, self-awakening, and fulfilment of the human goal.**
2. **Value-based:** Based on **justice in relationship.**
3. **Sensation-based:** This is now **guided by goal-based and value-based tasting.** Sensation is used for the **right identification of physical facility for nurturing, protection, and right utilisation of the body.** For example, a mother cooks tasty food that is also healthy, motivated by the **feeling of care (value)** for her child, rather than just sensation.

Awakening to higher activities allows one to **observe, evaluate, and inspire lower-level activities** in terms of co-existence, harmony, and relationship. If higher activities are unactivated, lower activities are unguided, causing problems. The solution is to awaken to higher activities to guide the lower ones.

Sources of Happiness

The document clearly distinguishes between sources of continuous and temporary happiness:

- **Sources of Continuous Happiness:**
 1. **Right understanding in the self:** Understanding relationship, harmony, and co-existence at all levels of being (human being, family, society, nature, existence). This has a definite completion point, ensures continuity, and leads to self-organisation (Swatantrata).
 2. **Right feeling and right thought in the self:** Feelings like trust, respect, affection, care, guidance, reverence, glory, gratitude, and love. These also have definite completion points and continuity is possible.

This state of harmony in the self manifests as **Bliss** (harmony between realisation and understanding), **Satisfaction** (at the level of contemplation), **Peace** (at the level of comparing-analysing), and **Happiness** (at the level of selecting-tasting).

- **Sources of Temporary Happiness (Excitement):**
 1. **Feelings from others:** Such as getting respect, affection, or gratitude from others.
 2. **Sensation from the body:** Through sound, touch, form, taste, smell.

Problems with Temporary Sources of Happiness:

- They provide happiness only **temporarily**; continuity is not possible.

- They lead to **dependence on something outside**.
- There is **no completion point**.
- It is **not definite** whether one will receive them from outside, leading to indefiniteness.
- They often lead to a state of **unhappiness** or excitement/depression.

Purpose of Right Understanding, Right Feeling, Sensation, and Physical Facility:

- **Right understanding:** Ensures happiness in the self with a definite completion point.
- **Feelings from others:** Used as information to evaluate the state of the other person and define one's complementary role, not as a source of one's own happiness.
- **Sensation:** Used to evaluate the state of physical facility, identify what is good for nurturing/protection of the body, and as a means for behaviour/work and sharing knowledge.
- **Physical facility:** Required for human beings but **not sufficient to ensure continuous happiness**.

Excitement and Escape

When people try to achieve happiness through sensation or favourable feelings from others, they get caught in a cycle of **excitement** (temporary happiness) and **escape** (running away from unhappiness).

- **Excitement** comes from continuous consumption of physical facility, enjoyment of favourable sensations (which ultimately become intolerable), or receiving favourable feelings from others.
- **Escape** occurs when one cannot manage unhappiness and tries to run away from it through activities like **overeating, oversleeping, intoxication (Gutkha, tobacco, alcohol, drugs)**, or in extreme cases, violence or suicide.

This oscillation between excitement and escape is characteristic of **animal consciousness**.

The Way Out: Transformation to Human Consciousness

The only way out of this vicious cycle is to **transform from animal consciousness to human consciousness**.

- This transformation involves **ensuring right understanding in the self, right feeling in the self, and right thought in the self**.

- **Having right understanding and right feeling within leads to a state of continuous harmony and happiness.**
- By understanding that everything in existence is in relationship, harmony, and co-existence, one can cultivate feelings based on this, leading to continuous happiness (Bliss, Satisfaction, Peace, Happiness).
- This transformation is facilitated by direct observation through exercises.

Unit 5

Module 5, "Understanding Human Conduct, All-Encompassing Resolution and Holistic Way of Living," builds upon previous lectures concerning the right understanding of the human being and existence. It delves into human conduct in detail, investigating it based on the knowledge of human beings and existence. The sources note that while there can be various formulations of human conduct depending on one's perspective, the **basis of right understanding remains the same**.

The module presents two primary models for understanding human conduct: Model 1 and Model 2.

Model 1 of Human Conduct

Model 1 explores human conduct in two possibilities:

1. **Conduct when moving towards higher activities of the Self.** This represents the **present condition** of individuals, gradually progressing from lower to higher activities. Exercises 1 and 2, which focus on gradually seeing relationship, harmony, and co-existence, are described as efforts aligned with this possibility.
2. **Conduct when moving downwards from the highest activity of the Self.** This is presented as representing **complete human conduct**, the **standard, or the highest possibility**. The course primarily focuses on this second possibility to establish a clear goal for human conduct.

Detailed Explanation of Model 1 (Moving Downwards from Realisation)

The investigation into human conduct in Model 1 begins from the activity of Realisation, moving downwards.

- **Realisation:** At this highest level, there is the **realisation of co-existence**, which means understanding that every unit in existence is **submerged in space**.
- **Authentication:** Following realisation, the natural outcome is the decision to live with this co-existence. This decision is called **authentication**.
- **Understanding:** With authentication, one strives to **understand every unit in existence**, particularly their **self-organisation and innateness**, and the **harmony in nature as a whole**. This clarity is termed **understanding**.
- **Determination:** Based on understanding harmony, the natural decision to live with this harmony and self-organisation is called **determination**.

- **Contemplation:** With determination, one contemplates their **relationship with every unit in existence** and their **participation in the larger order of nature**. This involves clarifying one's relationship with other human beings and the rest of nature.

These three points of clarity—**realisation of co-existence (submergence), understanding of harmony (self-organisation, innateness), and contemplation of relationship (natural characteristic, participation)**—constitute **Block B1, known as Right Understanding**. This foundation is **definite, universal, and continuous**, essential for formulating human conduct correctly, regardless of the model. Historically, this foundation has been based on: * **Understanding/Realisation of Truth (co-existence)**. * **Feeling of Love (being related to all)**. * **Responsibility for fulfilment of that relationship (Compassion)**.

- **Desire, Thought, Expectation (Block B2):** The clarity gained in Block B1 **guides one's desire**. With this guidance, desire becomes **definite** – to live in relationship, harmony, and co-existence, rather than fluctuating indefinitely. **Thought** (comparing, analysing) is then based on co-existence, harmony, and relationship, leading to **right utilisation** of the body, physical facilities, and sensations.
- **Expression Outside (Behaviour, Work, Participation):** This guided desire and thought naturally express themselves through the body in external actions.
 - **Behaviour** with human beings leads to **mutual happiness (justice)**.
 - **Work** with the rest of nature leads to **mutual prosperity** (one's prosperity and preservation of nature).
 - **Participation in the larger order** (family, village, society, up to the whole existence) leads to the **fulfilment of the human goal**, resulting in an **undivided human society** and a **universal human order**.
- **Human Tradition:** The continuity of this undivided society and universal human order across generations forms the **human tradition**.

At the level of the Self, this complete human conduct leads to internal states of **happiness, peace, satisfaction, and bliss**. This entire progression represents the comprehensive and standard human conduct that ensures fulfilment for human beings and for nature.

Model 2 of Human Conduct

Model 2 articulates human conduct in terms of **Values, Policy, and Character**.

1. **Human Values:** This refers to the **understanding of "what to do as a human being" and "what not to do as a human being"**. It is essentially the clarity of one's participation or role in existence. The sources identify 30 values, categorised as follows:

- **In the Self: Happiness, Peace, Satisfaction, Bliss** (together called Continuous Happiness), arising from harmony within.
 - **In Universal Human Order:** Values related to participation in the larger societal order, including **Perseverance, Bravery, Generosity, Kindness, Beneficence, and Compassion**. These describe commitment to living in and helping others achieve harmony.
 - **In Human-Human Relationship (Justice):**
 - **9 Established Values:** **Trust** (foundation value), **Respect, Affection, Care, Guidance, Reverence, Glory, Gratitude, and Love** (complete value).
 - **9 Expressed Values:** These are the expressions of the established values in behaviour, such as **Complementariness** (for Trust), **Compliance/Transparency** (for Respect), and **Commitment** (for Affection). Love, as the feeling of being related to all, is expressed as **Unanimity**.
 - **In Human-Rest of Nature Relationship:** Values like **Utility Value** (nurturing, protecting, right utilisation of the body via physical facilities) and **Artistic Value** (facilitating enrichment, protection, and right utilisation of physical facility, making things people-friendly and easy to use).
2. **Policy:** Policy details "how to do" what the values define. It includes **plan, program, implementation, results, and evaluation**. Policy is articulated for the **enrichment, protection, and right utilisation** of one's **Self, Body, and Physical Facility (rest of nature)**.
- **Right Utilisation (Priority 1):** This is the highest priority.
 - **Self:** Investing the Self for self-study, practice, and authenticating in living to achieve right understanding, feeling, and continuous happiness.
 - **Body:** Using the Body to facilitate the Self's realisation and expression in behaviour, work, and participation.
 - **Physical Facility (PF):** Using PF for nurturing, protection, and right utilisation of the Body, and for relationship and societal order.
 - **Protection (Priority 2):**
 - **Self:** Ensuring a conducive environment and protecting from unfavourable ones.
 - **Body:** Ensuring shelter, clothes, etc..

- **PF:** Proper storage.
- **Enrichment (Priority 3):**
 - **Self:** Policy for education-sanskar, adult education, and societal development (music, dance, drama) to enrich understanding and feeling.
 - **Body:** Policy for intake and lifestyle to ensure Body health.
 - **PF:** Policy for production with right process and skills to ensure prosperity and preserve nature.
- 3. **Character:** Character is the **compassionate expression of human values and policies** in behaviour, work, and participation in the larger order.
 - **Behaviour:** Ensuring **justice and mutual happiness** in human-human interaction, while also **filling gaps created in ignorance** (compensating for past misbehaviour).
 - **Work:** Ensuring **preservation and mutual prosperity** with the rest of nature, also **filling gaps created in ignorance** (compensating for past damage to nature).
 - **Rightfully acquired wealth (Swa-dhan):** Wealth obtained through **labour on nature, exchange for service, gifts, or awards**. Wealth taken by force or manipulation is exploitation.
 - **Chastity in conjugal relationship (Swa-nari/Swa-purush):** Maintaining definiteness of conduct in husband-wife relationships.

In summary, Model 2 posits that **values are definite (Block B1)**, indicating "what to do." **Policy provides details of "how to do" (Block B2)**, allowing for creativity based on local conditions. **Character is the expression** of these in behaviour, work, and participation.

All-Encompassing Resolution and Human Goals

The concept of **Resolution** (Samadhan) is central to ensuring continuous happiness. It is described as having **right understanding, right feeling, and right thought** in relation to one's living with the whole existence. The nine aspects of this Resolution are:

1. **Right Understanding (3.1):** Clarity about the existence as a whole, seeing reality as it is (Block B1: Realisation of co-existence, Understanding of harmony, Contemplation of relationship). This takes place purely at the level of the Self and is a source of continuous happiness.
2. **Wisdom (3.2):** The **identification of the human goal** – "what to do" and "what not to do" as a human being, aligning with the existential order.

- **UHV II Formulation of Human Goal (Societal Level):**
 - **Right Understanding, Feeling, and Thought (Happiness)** in Every Individual.
 - **Prosperity** in Every Family.
 - **Fearlessness (Trust)** in Society.
 - **Co-existence (Mutual Fulfilment)** in Nature/Existence. These goals are realised through **Five Dimensions of Universal Human Order**: Education – Sanskar, Health – Sanyam, Production – Work, Justice – Preservation, Exchange – Storage.
 - **Alternative Formulation (Indian Tradition):**
 - **Dharma (Right Understanding of Natural Laws)**: Laws of living in relationship and order, existential laws, including physical and behavioural/societal laws.
 - **Arth (Rightfully Earned Wealth)**: Physical facility ensured through labour on natural resources in line with natural laws, used for self and others' physical needs.
 - **Kaam (Fulfilment of Wishes)**: Fulfilment of wishes for oneself, society, and social order.
 - **Moksha (Liberation)**: Seeing existence clearly, being rid of bondages from misunderstandings and confusions. The suggested order of effort is Dharma, then Arth, then Kaam, and finally Moksha.
3. **Science (3.3):** Details of "**how to fulfil the human goal**". This takes place at the level of imagination, thought, and expectation (Block B2), encompassing plan, program, implementation, result, and evaluation. This collective thought and program is referred to as **Culture**, while its expression (behaviour, work, participation) is **Civilisation**. Science involves three main aspects:
- **Science of Behaviour**: How to ensure **justice and mutual happiness** in human-human relationships, from family to world family, leading to an **undivided society**. It is founded on **understanding co-existence** and the **feeling of love** (acceptance of being related to all), which expands from affection to all units in nature.
 - **Science of Work**: How to ensure **mutual enrichment** in human-rest of nature relationships, leading to **prosperity in human beings and preservation of nature**. This involves identifying physical facility needs, production through cyclic and mutually enriching (eco-friendly) processes, ensuring justice for

people involved (people-friendly), right utilisation of physical facility, and proper exchange and storage for mutual fulfilment. It also includes enrichment, protection, and right utilisation of nature.

- **Critique of Present Science of Work:** The current science of work often **fails to identify human needs**, promotes **over-consumption and indulgence**, uses **non-cyclic/non-mutually enriching processes** leading to pollution and resource depletion, and prioritises **profit maximisation over justice and mutual fulfilment**.
 - **Science of Participation in Larger Order:** How to participate in societal systems and the **five dimensions of human order** to fulfil human goals, expanding from family to world family order. This involves facilitating the existence, innateness, and inheritance of all four orders of nature (physical, bio, animal, human). Key feelings for participation include **perseverance, bravery, generosity, kindness, beneficence, and compassion**. The **Dimensions of Human Order** include Education-Sanskar, Health-Sanyam, Production-Work, Justice-Preservation, Exchange-Storage, Right Utilisation, Preservation (Security), and Administrative & Social Services.
 - **Critique of Present Science:** Current science largely neglects the science of behaviour and participation, even its approach to the science of work is limited. There is a need to **broaden the scope of science** to include **consciousness and space** as realities, and the study of **relationship, harmony, and co-existence**.
4. **Behaviour (3.4):** Recognition, fulfilment, and evaluation of **human-human relationship** leading to **mutual happiness (justice)**, extending from the family to the world family, giving rise to an **undivided human society**. This perspective, starting from the realisation of co-existence and feeling of love for all, prevents exploitation of others for family benefit.
 5. **Work (3.5):** Recognition, fulfilment, and evaluation of **human-rest of nature relationship** leading to **mutual enrichment (prosperity and preservation)**. This work is seen in the context of nature as a whole, ensuring mutual fulfilment with all units, not just immediate surroundings.
 6. **Participation in Larger Order (3.6):** Participation in the **five dimensions of universal human order** for the fulfilment of the four human goals, from family order to world family order.
 7. **Undivided Human Society (3.7):** The **expansion of human-human relationship** to the whole existence, rooted in the feeling of love (realisation of co-existence) and leading to **justice and mutual fulfilment from family to world family**.

8. **Universal Human Order (3.8):** The **outcome of living in harmony in nature** (with human beings and the rest of nature), ensuring the fulfilment of human goals through participation in the five dimensions of human order, from family order to world family order.
9. **Human Tradition (3.9):** The **continuity of undivided human society and universal human order** from generation to generation, ensuring the fulfilment of the human goal continuously. A possible sequence for materialising this tradition is **Human Education → Human Conduct → Human Constitution → Human Order**, with **Human Education** identified as the most effective entry point for desirable changes.

Sum Up: Key Learnings and Practice

The course's essence is to understand the **role of human beings in existence (human conduct)** to achieve fulfilment for oneself, others, and nature.

- **Self is Central:** The **Self (I)** is central to human existence, and the **body is merely an instrument**. The **need of the Self is continuous happiness**, fulfilled by **right understanding, right feeling, and right thought** (Resolution).
- **Existence is Co-existence:** Existence is understood as **units (material and consciousness) submerged in space**. This co-existence is **ever-present, ever-effective, and ever-expressed** through the four orders of nature (physical, bio, animal, human). Human understanding involves awakening the Self's activities.
- **Self-Development:** The Self progresses from lower activities like **selecting and tasting** (seen in animals and sensation-driven human behaviour) to higher activities of **contemplation, understanding, and realisation**. **Realisation of co-existence guides all lower activities**, leading to definite desires and a shift from reaction to response.
- **Resolution and Expression:** Right Understanding, Wisdom, and Science occur purely within the Self and are the **source of continuous happiness**. Behaviour, Work, and Participation are **natural expressions** of this internal harmony, not its source.

Practice Sessions (Exercises 1 and 2)

The purpose of these exercises is to ensure continuous happiness by developing **right understanding, right feeling and thought in the Self**, and **competence for right living** with the world outside.

1. **Exercise 1 – Observing the Self by the Self:** Focuses on **understanding the consciousness (Self)** by directly observing its activities (imagination, desire, thought, expectation) without involving the body. This inward observation aims to establish **harmony within the Self** first.
2. **Exercise 2 – Observing the Body and the World Outside by the Self:** Aims to understand how the **Self, in a state of harmony and happiness**, naturally expresses

itself and interacts with the body and the external world. It distinguishes the Self and Body as distinct realities in space, with transactions guided by the Self through sensation. It also helps in observing and purifying one's *sanskar* (preconditioning).

The overall goal is to achieve **internal harmony** and then **relate to the whole existence in a mutually fulfilling manner**.

Self-Evaluation

Progress in these exercises can be evaluated by reflecting on:

- Understanding of realities.
- Clarity of the steps observed within oneself.
- The clarity with which **happiness is perceived as an innate nature**, rather than an external effect.
- The personal program developed to ensure continuous happiness through right understanding and feeling.
- The proportion of one's program focused on **self-development (harmony within)** versus **seeking external favourable effects (body-focused)**.
- The **commitment** of time and effort for self-development and social/societal responsibility.
